Extending a dynamic programming language and runtime environment with access control Tessenow, Philipp,Felgentreff, Tim,Bracha, Gilad,Hirschfeld, Robert,2016-11-09 Complexity in software systems is a major factor driving development and maintenance costs To master this complexity software is divided into modules that can be developed and tested separately In order to support this separation of modules each module should provide a clean and concise public interface Therefore the ability to selectively hide functionality using access control is an important feature in a programming language intended for complex software systems Software systems are increasingly distributed adding not only to their inherent complexity but also presenting security challenges The object capability approach addresses these challenges by defining language properties providing only minimal capabilities to objects One programming language that is based on the object capability approach is Newspeak a dynamic programming language designed for modularity and security The Newspeak specification describes access control as one of Newspeak s properties because it is a requirement for the object capability approach However access control as defined in the Newspeak specification is currently not enforced in its implementation This work introduces an access control implementation for Newspeak enabling the security of object capabilities and enhancing modularity We describe our implementation of access control for Newspeak We adapted the runtime environment the reflective system the compiler toolchain and the virtual machine Finally we describe a migration strategy for the existing Newspeak code base so that our

access control implementation can be integrated with minimal effort Software Engineering for Science Jeffrey C. Carver, Neil P. Chue Hong, George K. Thiruvathukal, 2016-11-03 Software Engineering for Science provides an in depth collection of peer reviewed chapters that describe experiences with applying software engineering practices to the development of scientific software It provides a better understanding of how software engineering is and should be practiced and which software engineering practices are effective for scientific software The book starts with a detailed overview of the Scientific Software Lifecycle and a general overview of the scientific software development process It highlights key issues commonly arising during scientific software development as well as solutions to these problems The second part of the book provides examples of the use of testing in scientific software development including key issues and challenges The chapters then describe solutions and case studies aimed at applying testing to scientific software development efforts The final part of the book provides examples of applying software engineering techniques to scientific software including not only computational modeling but also software for data management and analysis The authors describe their experiences and lessons learned from developing complex scientific software in different domains About the Editors Jeffrey Carver is an Associate Professor in the Department of Computer Science at the University of Alabama He is one of the primary organizers of the workshop series on Software Engineering for Science <http://www.SE4Science.org/workshops> Neil P Chue Hong is Director of the Software Sustainability Institute at the University of Edinburgh His research interests include barriers and incentives in research software ecosystems and the role of software as a research object George K Thiruvathukal is Professor of Computer Science at Loyola University Chicago and Visiting Faculty at Argonne National Laboratory His current research is focused on software metrics in open source mathematical and scientific software **Drupal in Libraries** Kenneth J.
