Vestibular Learning Manual:

Vestibular Learning Manual Bre Lynn Myers, 2011 In *Seeing Things* Robert Hudson assesses a common way of arguing about observation reports called robustness reasoning. Robustness reasoning claims that an observation report is more likely to be true if the report is produced by multiple independent sources. *Seeing Things* argues that robustness reasoning lacks the special value it is often claimed to have. Hudson exposes key flaws in various popular philosophical defenses of robustness reasoning. This philosophical critique of robustness is extended by recounting five episodes in the history of science from experimental microbiology to atomic theory, astrophysics and astronomy where robustness reasoning is or could be claimed to have been used. Hudson goes on to show that none of these episodes do in fact exhibit robustness reasoning. In this way the significance of robustness reasoning is rebutted on both philosophical and historical grounds. But the book does more than critique robustness reasoning. It also develops a better defense of the informative value of observation reports. The book concludes by relating insights into the failure of robustness reasoning to a popular approach to scientific realism called theoretical preservationism. Hudson argues that those who defend this approach to realism commit similar errors to those who advocate robustness reasoning. In turn a new form of realism is formulated and defended. Called methodological preservationism, it recognizes the fundamental value of naked eye observation to scientists and the rest of us. *Vestibular Lab Manual, Second Edition* Bre Lynn Myers, 2018-07-13
