Mattila, L.N. Guinee, C.A. Mayo, 1987 **Here Come the Humpbacks!** April Pulley Sayre, 2013-02-01 In this latest book by acclaimed science writer April Pulley Sayre young readers follow along as a mother humpback whale and her calf make their annual trek from the warm waters of the Caribbean to their summer feeding grounds off the coast of New England and back again Within this extraordinary story of migration Sayre provides information about how humpback whales breathe sing and how they got their name a secondary layer of text expands upon the more intricate details But aside from the basics about the humpback whale species **HERE COME THE HUMPBCKS** also delves into the dangers these whales face from other mammals and sea life such as hungry orcas to man made threats like pollution and giant ships Jamie Hogan s stunning rich pastel illustrations complement Sayre s text beautifully and make this book a great choice for a read aloud in the classroom library or at home *Humpback Whales: A Journey to Warm Waters* L. E. Carmichael, 2016-08-01 When the seasons change many animals migrate to new homes Readers will learn about these fascinating creatures in Nature s Great Journeys This series explores the physical features behaviors and histories of migratory animals with easy to read text and vivid images This is an AV2 media enhanced book A unique book code printed on page 2 unlocks multimedia content This book comes alive with video audio weblinks slide shows activities quizzes and much more *The Cultural Evolution of Humpback Whale Song in the North Atlantic and South Pacific Oceans* Natalie Catherine Sinclair, 2024 **HUMPBCK WHALE SINGING BEHAVIOUR IN THE WESTERN NORTH ATLANTIC** Katie Kowarski, 2020 Marine passive acoustic monitoring PAM is a valuable tool to assess the distribution habitat use and behaviour of marine mammals including the acoustically prolific humpback whale With increasing amounts of data collected the challenge of effectively mining PAM data for signals of interest and interpreting those signals is faced by researchers globally I completed a literature review on the data analysis methods employed in PAM baleen whale studies 2000 2019 before exploring the dynamic and complex humpback repertoire which is particularly challenging for PAM The review revealed a spectrum of methodologies ranging from full manual data analysis by a human to fully automated techniques I propose recommendations for future work to encourage the application of best practices that will result in more robust and comparable research Humpback whale vocalizations have been studied for years but little is known of when where and how seasonal male singing begins in the fall and ends in the spring Acoustic recordings of humpback whale vocalizations from Canada the U S A and the Caribbean in 2015 2017 were manually analysed Humpback whales were present from Labrador to Massachusetts Bay during the fall and

early winter Song development occurred gradually over weeks with vocalizations transitioning from non song calls to song fragments to full songs Initially sporadic in occurrence singing began in September but was not regularly heard until late October when full songs were common I found evidence that the onset of regular singing occurs earlier at lower latitudes longer photoperiods and higher temperatures The theme order in early season full songs was variable until December when theme order became more consistent with what was observed the previous spring Dominican Republic breeding ground songs recorded in January and March were crystalized in terms of theme order Song duration increased gradually through the breeding season Spring song cessation was only captured at a single site season in Canada and compared to song development it was abrupt with few song fragments These late season songs had consistent theme orders I propose that the patterns observed here may in part be driven by physiological processes like those of songbirds
