War Of Nerves Chemical Warfare From World War I To Al Qaeda:

War of Nerves Jonathan Tucker, 2007-02-13 In this important and revelatory book Jonathan Tucker a leading expert on chemical and biological weapons chronicles the lethal history of chemical warfare from World War I to the present At the turn of the twentieth century the rise of synthetic chemistry made the large scale use of toxic chemicals on the battlefield both feasible and cheap Tucker explores the long debate over the military utility and morality of chemical warfare from the first chlorine gas attack at Ypres in 1915 to Hitler s reluctance to use nerve agents he believed incorrectly that the U S could retaliate in kind to Saddam Hussein s gassing of his own people and concludes with the emergent threat of chemical terrorism Moving beyond history to the twenty first century War of Nerves makes clear that we are at a crossroads that could lead either to the further spread of these weapons or to their ultimate abolition Weapons of Mass Destruction Michael Kort, 2010 Presents a guide to the issues of weapons of mass destruction including definitions primary sources case studies research tools organizations and notable persons *One Hundred Years of Chemical Warfare: Research, Deployment, Consequences* Bretislav Friedrich, Dieter Hoffmann, Jürgen Renn, Florian Schmaltz, Martin Wolf, 2017-11-26 This book is open access under a CC BY NC 2.5 license On April 22 1915 the German military released 150 tons of chlorine gas at Ypres Belgium Carried by a long awaited wind the chlorine cloud passed within a few minutes through the British and French trenches leaving behind at least 1 000 dead and 4 000 injured This chemical attack which amounted to the first use of a weapon of mass destruction marks a turning point in world history The preparation as well as the execution of the gas attack was orchestrated by Fritz Haber the director of the Kaiser Wilhelm Institute for Physical Chemistry and Electrochemistry in Berlin Dahlem During World War I Haber transformed his research institute into a center for the development of chemical weapons and of the means of protection against them Bretislav Friedrich and Martin Wolf Fritz Haber Institute of the Max Planck Society the successor institution of Haber s institute together with Dieter Hoffmann Jürgen Renn and Florian Schmaltz Max Planck Institute for the History of Science organized an international symposium to commemorate the centenary of the infamous chemical attack The symposium examined crucial facets of chemical warfare from the first research on and deployment of chemical weapons in WWI to the development and use of chemical warfare during the century hence The focus was on scientific ethical legal and political issues of chemical weapons research and deployment including the issue of dual use as well as the ongoing effort to control the possession of chemical weapons and to ultimately achieve their elimination The volume consists of papers presented at the symposium and supplemented by additional articles that together cover key aspects of chemical warfare from 22 April 1915 until the summer of 2015 **The A to Z of Nuclear, Biological and Chemical Warfare** Benjamin C. Garrett, John Mason Hart, 2009-09-16 Human experience with nuclear biological and chemical NBC warfare has been limited especially in comparison to conventional forms of warfare Our experience with nuclear warfare is confined to a period of less than one week during the end of World War II when the United States

successfully used two nuclear weapons against targets in Japan The course of biological warfare and modern use of biological weapons are difficult to track owing to the difficulty of differentiating deliberate use from natural outbreaks However the keen potential of biological weapons in acts of terror was shown in the mass disruption caused in the fall 2001 experience in the U S with the release of anthrax through the American postal system Chemical weapons have been used in a handful of conflicts since their introduction to modern warfare during World War I most recently during the Iran Iraq War during the 1980s Despite this limited experience NBC warfare continues to exert a certain fascination among states The A to Z of Nuclear Biological and Chemical Warfare covers the development and use of NBC weapons as well as efforts to limit or control the use of these weapons through a chronology a bibliography an introductory essay and dictionary entries Over 500 cross referenced dictionary entries provide a unique selection of terms related to NBC warfare ranging from basic descriptions of substances used in NBC warfare to details on incidents and episodes where NBC weapons were used Entries are structured around historical events persons important to NBC warfare countries where such weapons have been developed or used and international treaties and treaty related organizations

Economic Poisoning Adam M. Romero, 2021-11-16 The toxicity of pesticides to the environment and humans is often framed as an unfortunate effect of their benefits to agricultural production In *Economic Poisoning* Adam M Romero upends this narrative and provides a fascinating new history of pesticides in American industrial agriculture prior to World War II Through impeccable archival research Romero reveals the ways in which late nineteenth and early twentieth century American agriculture especially in California functioned less as a market for novel pest killing chemical products and more as a sink for the accumulating toxic wastes of mining oil production and chemical manufacturing Connecting farming ecosystems to technology and the economy Romero provides an intriguing reconceptualization of pesticides that forces readers to rethink assumptions about food industry and the relationship between human and nonhuman environments

reveals the shocking toxic contamination of the Pacific Ocean and millions of victims by the US military For decades US military operations have been contaminating the Pacific region with toxic substances including plutonium dioxin and VX nerve agent Hundreds of thousands of service members their families and residents have been exposed but the United States has hidden the damage and refused to help victims After World War II the United States granted immunity to Japanese military scientists in exchange for their data on biological weapons tests conducted in China in the following years nuclear detonations in the Pacific obliterated entire islands and exposed Americans Marshallese Chamorros and Japanese fishing crews to radioactive fallout At the same time the United States experimented with biological weapons on Okinawa and stockpiled the island with nuclear and chemical munitions causing numerous accidents Meanwhile the CIA orchestrated a campaign to introduce nuclear power to Japan the folly of which became horrifyingly clear in the 2011 meltdowns in Fukushima Prefecture Caught in a geopolitical grey zone US territories have been among the worst affected by military contamination including Guam Saipan and Johnston Island the final disposal site of apocalyptic volumes of chemical weapons and Agent Orange Accompanying this damage US authorities have waged a campaign of cover ups lies and attacks on the media which the author has experienced firsthand in the form of military surveillance and attempts by the State Department to impede his work Now for the first time this explosive book reveals the horrific extent of contamination in the Pacific and the lengths the Pentagon will go to conceal it **The Routledge History of American Science** Timothy W.

the same name *Routledge Handbook of Terrorism and Counterterrorism* Andrew Silke, 2018-09-03 This new Handbook provides a comprehensive state of the art overview of current knowledge and debates on terrorism and counterterrorism as well as providing a benchmark for future research The attacks of 9 11 and the global war on terror and its various legacies have dominated international politics in the opening decades of the 21st century In response to the dramatic rise of terrorism within the public eye and the academic world the need for an accessible and comprehensive overview of these controversial issues remains profound The Routledge Handbook of Terrorism and Counterterrorism seeks to fulfil this need The volume is divided into two key parts Part I Terrorism This section provides an overview of terrorism covering the history of terrorism its causes and characteristics major tactics and strategies major trends and critical contemporary issues such as radicalisation and cyber terrorism It concludes with a series of detailed case studies including the IRA Hamas and Islamic State Part II Counterterrorism This part draws on the main themes and critical issues surrounding counterterrorism It covers the major strategies and policies key events and trends and the impact and effectiveness of different approaches This section also concludes with a series of case studies focused on major counterterrorism campaigns This book will be of great interest to all students of terrorism and counterterrorism political violence counter insurgency criminology war and conflict studies security studies and IR more generally Better Safe Than Sorry Michael Krepon, 2009-01-02 In 2008 the iconic doomsday clock of the Bulletin of the Atomic Scientists was set at five minutes to midnight two minutes closer to Armageddon than in 1962 when John F Kennedy and Nikita Khrushchev went eyeball to eyeball over missiles in Cuba We still live in an echo chamber of fear after eight years in which the Bush administration and its harshest critics reinforced each other's worst fears about the Bomb And yet there have been no mushroom clouds or acts of nuclear terrorism since the Soviet Union dissolved let alone since 9 11 Our worst fears still could be realized at any time but Michael Krepon argues that the United States has never possessed more tools and capacity to reduce nuclear dangers than it does today from containment and deterrence to diplomacy military strength and arms control The bloated nuclear arsenals of the Cold War years have been greatly reduced nuclear weapon testing has almost ended and all but eight countries have pledged not to acquire the Bomb Major powers have less use for the Bomb than at any time in the past Thus despite wars crises and Murphy's Law the dark shadows cast by nuclear weapons can continue to recede Krepon believes that positive trends can continue even in the face of the twin threats of nuclear terrorism and proliferation that have been exacerbated by the Bush administration's pursuit of a war of choice in Iraq based on false assumptions Krepon advocates a back to basics approach to reducing nuclear dangers reversing the Bush administration's denigration of diplomacy deterrence containment and arms control As he sees it The United States has stumbled before but America has also made it through hard times and rebounded With wisdom persistence and luck another dark passage can be successfully navigated
