

INTRODUCTION TO WASTEWATER TREATMENT

The term wastewater is commonly used to describe liquid wastes that are collected and transported to a treatment facility through a system of sewers. Wastewater is generally divided into two broad classifications: domestic wastewater and industrial wastewater. Domestic wastewater comes from communities of homes, businesses, and institutions. Domestic wastewater is 99.9% water and only 0.1% solids. Milligrams per liter (mg/L) is the metric equivalent of parts per million (one part in a million parts). One percent (1%) is equal to 10,000 mg/L. So a 0.1% solids concentration is equal to 1000 mg/L. The solids in domestic wastewater are both dissolved and suspended solids. Suspended solids can be settled out or filtered but dissolved solids will have to be converted to suspended solids during the treatment process.

BOD AND SUSPENDED SOLIDS

The strength of the wastewater is determined by measuring the amount of suspended material in the water and the amount of organic material in the water. The suspended, filterable solids in the waste flow are known as Suspended Solids or SS. They can be trapped on a filter, dried, and weighed to determine the concentration. The organic strength of the wastewater is determined indirectly. The microorganisms in the biological treatment processes decompose or stabilize the raw organic material in the waste flow. As they do this, they use oxygen as part of the respiration process. Instead of directly measuring the strength of the organics, the amount of oxygen that the "bugs" use as they eat it is determined. This is known as the Biochemical Oxygen Demand or BOD. If these organics are not stabilized in the treatment process they will deplete dissolved oxygen from the receiving water. This oxygen depletion can result in fish kills and damage to the aquatic ecosystem.

Some of the suspended solids are organic, but most of the organics in the wastewater are dissolved. About 40% of the BOD will be suspended particles and most of them will settle out without further treatment. But 60% of the BOD is dissolved and must be used as "Bug Food" to grow a culture of microorganisms that become "suspended solids" that are again removed by settling. Suspended solids are classified as "Suspended" and "Settleable". About 60-70% of the Suspended Solids in raw wastewater are settleable. The rest will have to be made settleable in the biological processes. Domestic wastewater will have a BOD of between 150-300 mg/L and SS in the 100-400 mg/L range. Nitrogen, in the form of ammonia, will also be present in domestic wastewater. Ammonia concentrations usually run from 10-40 mg/L.

Mathematics Manual for Water and Wastewater Treatment Plant Operators, Second Edition: Water Treatment Operations Frank R. Spellman, 2014-05-07 To properly operate a waterworks or wastewater treatment plant and to pass the examination for a waterworks wastewater operator's license it is necessary to know how to perform certain calculations. All operators at all levels of licensure need a basic understanding of arithmetic and problem solving techniques to solve the problems they typically encounter in the workplace. Hailed on its first publication as a masterly account written in an engaging highly readable user friendly style the Mathematics Manual for Water and Wastewater Treatment Plant Operators Second Edition has been expanded and divided into three specialized texts that contain hundreds of worked examples presented in a step by step format. They are ideal for all levels of water treatment operators in training and practitioners studying for advanced licensure. In addition they provide a handy desk reference and handheld guide for daily use in making operational math computations. This second volume Water Treatment Operations Math Concepts and Calculations covers computations commonly used in water treatment with applied math problems specific to waterworks operations allowing operators of specific unit processes to focus on their area of specialty. It explains calculations for pumping water source and storage coagulation and flocculation sedimentation filtration chlorination fluoridation and water softening. The text presents math operations that progressively advance to higher more practical applications of mathematical calculations including math operations that operators at the highest level of licensure would be expected to know and perform. To ensure correlation to modern practice and design this volume provides illustrative problems for commonly used waterworks treatment operations found in today's treatment facilities. Wastewater Treatment Fundamentals II-- Solids Handling and Support Systems Operator Certification Study Questions Water Environment Federation, 2021-09-10 **Mathematics Manual for Water and Wastewater Treatment Plant Operators: Water Treatment Operations** Frank R. Hailed on its first publication as a masterly account written in an engaging highly readable user friendly style the Mathematics Manual for Water and Wastewater Treatment Plant Operators Second Edition has been expanded and divided into three specialized texts that contain hundreds of worked examples presented in a step by step format. They are ideal for all levels of water treatment

operators in training and practitioners studying for advanced licensure. In addition, they provide a handy desk reference and handheld guide for daily use in making operational math computations. This first volume, *Basic Mathematics for Water and Wastewater Operators*, introduces and reviews fundamental concepts critical to qualified operators. Presented at a basic level, this volume reviews fractions and decimals, rounding numbers, significant digits, raising numbers to powers, averages, proportions, conversion factors, flow and detention time, and the areas and volumes of different shapes. It also explains how to keep track of units of measurement such as inches, feet, and gallons during the calculations. After building a strong foundation based on theoretical math concepts, the text moves on to applied math, basic math concepts applied in solving practical problems for both water and wastewater operations. The material is presented using clear explanations in manageable portions to make learning quick and easy, and illustrative real-world problems are provided that correlate to modern practice and design.

Eventually, you will no question discover a other experience and feat by spending more cash. yet when? pull off you put up with that you require to get those all needs when having significantly cash?
