Facing the Challenges of Water Governance Simon Porcher,Stéphane Saussier,2018-11-19 Access to water is one of the most pressing global issues of the twenty first century particularly when set against the background of a rapidly growing global population This book provides a cutting edge comprehensive overview of the challenges facing water governance and regulatory choices The recently adopted Sustainable Development Goals set forward an ambitious agenda of providing universal access to good quality water supply and sanitation services within a financially constrained environment however the various peculiarities of each country regarding water governance makes it difficult to identify and implement the best practices and benchmarks Drawing together empirical studies from countries around the world the editors and contributors combine extensive data to review the individual challenges facing each country from the supervision of autonomous regulatory bodies to the question of centralization and the influence of local utility companies This pioneering and practical volume will be of interest and value not only to students and scholars of water governance but also to practitioners and regulators

Water Security Bruce Lankford,Karen Bakker,Mark Zeitoun,Declan Conway,2013-10-15 The purpose of this book is to present an overview of the latest research policy practitioner academic and international thinking on water security an issue that like water governance a few years ago has developed much policy awareness and momentum with a wide range of stakeholders As a concept it is open to multiple interpretations and the authors here set out the various approaches to the topic from different perspectives Key themes addressed include Water security as a foreign policy issue The interconnected variables of water food and human security Dimensions other than military and international relations concerns around water security Water security theory and methods tools and audits The book is loosely based on a masters level degree plus a short professional course on water security both given at the University of East Anglia delivered by international authorities on their subjects It should serve as an introductory textbook as well as be of value to professionals NGOs and policy makers

Irrigation in the Mediterranean François Molle,Carles Sanchis-Ibor,Llorenç Avellà-Reus,2019-05-09 Mediterranean irrigation is diverse due to among other factors the relative importance of water in

the economy of each country varied levels of aridity heterogeneous levels economic social and technological levels of development and differences in political and social organization However most of the Mediterranean countries face similar problems to meet their water demands because of the scarcity and variability of renewable resources growing water requirements from non agricultural sectors increasing environmental concerns related to water quality and environmental degradation a social demand for larger public participation and important technological changes The time has come to reconsider the not one drop lost to the sea philosophy of yesteryears largely and to live within limits This book focuses on eight selected countries Tunisia Morocco Spain France Italy Turkey Israel and Egypt and provides a comparative perspective that both thoroughly explores their specificities and identifies the common challenges faced by the irrigation sector in these countries The book has been written at a critical moment when the continued application of a supply side water management model is revealing its unsustainable nature in numerous places when significant technological changes are taking place in the irrigation sector when new forms of management and governance are widely held as badly needed and finally when climate change is compounding many of the difficulties that have characterized irrigation policies and practices in the past decades This complicated future context makes Mediterranean irrigation face various political dilemmas on water management raising social tensions triggering territorial and land conflicts and stimulating new technological developments This book provides a timely analysis of the particular trajectory of eight Mediterranean countries in these uncertain transformations and attempts to identify the best strategies to avert or overcome future risks

Recipe for a Livable Planet William Sutton,Alexander Lotsch,Ashesh Prasann,2024-10-16 The global agrifood system has been largely overlooked in the fight against climate change Yet greenhouse gas emissions from the agrifood system are so big that they alone could cause the world to miss the goal of keeping global average temperatures from rising above 1.5 centigrade compared to preindustrial levels Greenhouse gas emissions from agrifood must be cut to net zero by 2050 to achieve this goal Recipe for a Livable Planet Achieving Net Zero Emissions in the Agrifood System offers the first comprehensive global strategic framework to mitigate the agrifood system s contributions to climate change detailing affordable and readily available measures that can cut nearly a third of the world s planet heating emissions while ensuring global food security These actions which are urgently needed offer three additional benefits improving food supply reliability strengthening the global food system s resilience to climate change and safeguarding vulnerable populations This practical guide outlines global actions and specific steps that countries at all income levels can take starting now focusing on six key areas investments incentives information innovation institutions and inclusion Calling for collaboration among governments businesses citizens and international organizations it maps a pathway to making agrifood a significant contributor to addressing climate change and healing the planet
