Anwar

Hossen, 2017-03-16 Dr Hossen carried out an exceptional program of research in Bangladesh which focused on water governance in relation to human rights international water law and environmental sustainability His major argument is that eco agricultural system encounters major disruptions due to a number of factors including regional hydropolitics and neoliberal and highly centralized approaches to water resource management that follow the principles of ecocracy In this context Dr Hossen explores three major questions i How can local ecological knowledge be incorporated into national water policy ii What strategies and reforms are required at the international watershed governance level and iii How can human rights principles including the principle of water as a human right be used to formulate more effective water policy and governance principles To answer these questions Dr Hossen explores the effects of regional hydropolitics on water management focusing on three large engineering projects the Farakka Barrage built by India on the Ganges River and the Ganges Kobadak GK and Gorai River Restoration GRR Projects in Bangladesh This analysis is based on his research into local knowledge and farming practices during a year of fieldwork in 2011 12 focus group discussions in depth case studies and

social survey methods In addition to this primary data he looks at extensive secondary documents from the government of Bangladesh pertaining to water management agricultural modernization and institutional structures The arguments herein are applicable particularly to the Ganges Brahmaputra Basin countries in South Asia but also to the river basins of other parts of the world

Indian Water Policy at the Crossroads: Resources, Technology and Reforms Vishal Narain, Annasamy Narayanamoorthy, 2016-01-12 This book reviews and analyzes emerging challenges in water policy governance and institutions in India Recent times have seen the contours of water policy shaped by new discourses and narratives there has been a pluralization of the state and a changing balance of power among the actors who influence the formulation of water policy Discourses on gender mainstreaming and Integrated Water Resource Management IWRM are influential though they have often remained rhetorical and difficult to put into practice Debate over property rights reform and inter linking of rivers has been polarized At the same time there has been a rising disenchantment with policy initiatives in participatory irrigation management cleaning up of water bodies and pollution control Fast depletion of groundwater resources and the importance of adopting new irrigation methods are getting increased focus in the recent policy dialogue The contributors review current debate on these and other subjects shaping the governance of water resources and take stock of new policy developments The book examines the experience of policy implementation and shows where important weaknesses still lie The authors present a roadmap for the future and discuss the potential of alternative approaches for tackling emerging challenges A case is made for greater emphasis on a discursive analysis of water policy to examine underlying policy processes The contributors observe that the ongoing democratization of water governance coupled with the multiplication of stresses on water will create a more visible demand for platforms for negotiation conflict resolution and dialogue across different categories of users and uses Finally the authors propose that future research should challenge implicit biases in water resources planning and address imbalances in the allocation of water from the perspectives of both equity and sustainability
