Water System Science and Policy Interfacing Philippe Quevauviller, 2010 Recent discussions among scientists and policy makers have highlighted that knowledge generated by many research and demonstration projects is not reaching policymakers in an efficient way Conversely the consideration of research results by the policy making community is not straightforward and difficulties arise in integrating the latest research developments in legislation The difficulty is enhanced by the fact that the policy making community is not defining its role as client sufficiently well and the dialogue and communication channels are far from ideal to ensure an efficient flow of information An increasing number of experts consider that improvements could be achieved through the development of a science policy interface so that R D results are synthesised in a way to efficiently feed policy implementation and that short medium and long term research needs may be identified This book examines the issue of integrating science into policy with an emphasis on water system knowledge and related policies An important feature of the book is the discussion of science policy interfacing needs illustrated by examples from authors from different countries in relation to water system management This publication is timely in that the science policy interfacing is now identified as a key challenge worldwide with regard to integrated water resource management and therefore the book will be of great interest to scientists water managers and stakeholders Readers will also benefit from a better understanding of the needs benefits and drawbacks of an established transfer mechanism of scientific outputs to policies

Gooch, 2015-07-15 Lagoons represent nearly 13% of the shoreline globally and around 5% in

Europe Coastal lagoons are shallow water bodies separated from the ocean by a barrier e.g. narrow spit connected at least intermittently to the ocean by one or more restricted inlets and usually geographically oriented parallel to the shore line. Coastal lagoons are flexible and usually able to cope with environmental change yet nowadays they are under threat. This is partly due to climate change impacts for example sea level rise and hydro meteorological extreme events but also due to more direct human activities and pressures. The book focuses on addressing these challenges through integrated management strategies seen in a land sea and science stakeholder policy perspective. Pan European management challenges are seen from the context of the perspectives of Policy Environment and Modelling. Four case study lagoons in different geographical locations in Europe provide examples of some of the practical experiences and results around these challenges. Possible impacts on drainage basins and lagoons are introduced through integrated scenarios which were developed through a multi science and land lagoon science perspective combined with interactions and contributions from stakeholders and citizens. Issues around climate change impacts on environmental conditions in both drainage basins and lagoons are also included. The book derives from a collaborative EC funded project entitled Integrated Water Resources and Coastal Zone Management in European Lagoons in the Context of Climate Change comprising nine partner institutes with a wide diversity in the scientific disciplines covered. Decision Support Systems for Risk-Based Management of Contaminated Sites Antonio Marcomini, Glenn Walter Suter II, Andrea Critto, 2008-12-16 Decision Support Systems for Risk Based Management of Contaminated Sites addresses decision making in environmental risk management for contaminated sites focusing on the potential role of decision support systems in informing the management of chemical pollutants and their effects. Considering the environmental relevance and the financial impacts of contaminated sites all over the post industrialized countries and the complexity of decision making in environmental risk management decision support systems can be used by decision makers in order to have a more structured analysis of a problem at hand and define possible options of intervention to solve the problem. Accordingly the book provides

an analysis of the main steps and tools for the development of decision support systems namely environmental risk assessment decision analysis spatial analysis and geographic information system indicators and endpoints Sections are dedicated to the review of decision support systems for contaminated land management and for inland and coastal waters management Both include discussions of management problem formulation and of the application of specific decision support systems This book is a valuable support for environmental risk managers and for decision makers involved in a sustainable management of contaminated sites including contaminated lands river basins and coastal lagoons Furthermore it is a basic tool for the environmental scientists who gather data and perform assessments to support decisions developers of decision support systems students of environmental science and members of the public who wish to understand the assessment science that supports remedial decisions

The Politics of Knowledge and Global Biodiversity Alice Vadrot, 2014-04-24

The establishment of the Intergovernmental Platform on Biodiversity and Ecosystem Services IPBES points to the crucial role attributed to science and knowledge for the successful implementation of biodiversity politics by both scientists and policy makers With the increased importance of biodiversity in international politics and in part inspired by the success the Intergovernmental Panel on Climate Change IPCC has had in raising awareness of global warming the call for an IPCC for Biodiversity was successful The Politics of Knowledge and Global Biodiversity gives a full overview of the process of its implementation as finalised in 2013 and proposes an innovative conceptual framework that puts this specific case into a more general perspective of international politics and relations It provides a detailed empirical analysis of the knowledge politics associated with the establishment of IPBES and its conceptual framework and methodological approach is grounded in a theoretical perspective This pioneering work is the first to examine IPBES in this way and is essential reading for researchers and scholars of International Relations Environmental and Biodiversity Politics Science Policy Interfaces and Global Environmental Governance It will also be of interest to political scientists and social scientists

Integrated Environmental Modelling to Solve Real World Problems A.T. Riddick, H. Kessler, J.R.A. Giles, 2017-01-10 The discipline of Integrated Environmental Modelling IEM has developed in order to solve complex environmental problems for example understanding the impacts of climate change on the physical environment IEM provides methods to fuse or link models together this in turn requires facilities to make models discoverable and also to make the outputs of modelling easily visualized The vision and challenges for IEM going forward are summarized by leading proponents Several case studies describe the application of model fusion to a range of real world problems including integrating groundwater and recharge models within the UK Environment Agency and the development of catastrophe models to predict better the impact of natural hazards Communicating modelling results to end users who are often not specialist modellers is also an emerging area of research addressed within the volume Also included are papers that highlight current developments of the technology platforms underpinning model fusion
