**Suisun Marsh** Peter B. Moyle, Amber D. Manfree, Peggy L. Fiedler, 2014-03-26 One of California's most remarkable wetlands Suisun Marsh is the largest tidal marsh on the West Coast and a major feature of the San Francisco Estuary This productive and unique habitat supports endemic species is a nursery for native fishes and is a vital link for migratory waterfowl The 6 000 year old marsh has been affected by human activity and humans will continue to have significant impacts on the marsh as the sea level rises and cultural values shift in the century ahead This study includes in depth information about the ecological and human history of Suisun Marsh its abiotic and biotic characteristics agents of ecological change and alternative futures facing this ecosystem

**Prairie Ducks** Lyle K. Sowls, Wildlife Management Institute, 1978

**The Teal** Matthieu Guillemain, Johan Elmsberg, 2014-10-23 Small noisy and colourful the Teal is a familiar duck throughout the wetlands and waterways Europe and Asia Once hunted extensively for the pot its numbers have recovered and it is now one of our commonest species of waterfowl A flagship species for wetland conservation the Teal is also an excellent model species for ecological research and this forms the spine of this new Poyser monograph The Teal looks at distribution and trends in numbers foraging ecology breeding behaviour population dynamics management and conservation of teal looking at both the Eurasian Common Teal and its North American equivalent the Green winged Teal which until relatively recently was considered to be the same species The book provides a scientifically robust account on which wetland managers research scientists and the ornithological community may rely with wider implications for the conservation and management of other waterfowl and for ecological research in general

*Seeking Refuge* Robert M Wilson, 2011-07-01 Each fall and spring millions of birds travel the Pacific Flyway the westernmost of the four major North American bird migration routes The landscapes they cross vary from wetlands to farmland to concrete inhabited not only by wildlife but also by farmers suburban families and major cities In the twentieth century farmers used the wetlands to irrigate their crops transforming the landscape and putting migratory birds at risk The U S Fish and Wildlife Service responded by establishing a series of refuges that stretched from northern Washington to southern California What emerged from these efforts was a hybrid environment where the distinctions between irrigated farms and wildlife refuges blurred Management of the refuges was fraught with conflicting priorities and practices Farmers and refuge managers harassed birds with shotguns and flares to keep them off private lands and government pilots took to the air dropping hand grenades among flocks of

geese and herding the startled birds into nearby refuges. Such actions masked the growing connections between refuges and the land around them. *Seeking Refuge* examines the development and management of refuges in the wintering range of migratory birds along the Pacific Flyway. Although this is a history of efforts to conserve migratory birds, the story Robert Wilson tells has considerable salience today. Many of the key places migratory birds use—the Klamath Basin, California's Central Valley, the Salton Sea—are sites of recent contentious debates over water use. Migratory birds connect and depend on these landscapes, and farmers face pressure as water is reallocated from irrigation to other purposes. In a time when global warming promises to compound the stresses on water and migratory species, *Seeking Refuge* demonstrates the need to foster landscapes where both wildlife and people can thrive.

Wetland Techniques James T. Anderson, Craig A. Davis, 2013-10-10

Wetlands serve many important functions and provide numerous ecological services such as clean water, wildlife habitat, nutrient reduction, and flood control. Wetland science is a relatively young discipline but is a rapidly growing field due to an enhanced understanding of the importance of wetlands and the numerous laws and policies that have been developed to protect these areas. This growth is demonstrated by the creation and growth of the Society of Wetland Scientists, which was formed in 1980 and now has a membership of 3,500 people. It is also illustrated by the existence of 2 journals, *Wetlands* and *Wetlands Ecology and Management*, devoted entirely to wetlands. To date, there has been no practical comprehensive techniques book centered on wetlands and written for wetland researchers, students, and managers. This techniques book aims to fill that gap. It is designed to provide an overview of the various methods that have been used or developed by researchers and practitioners to study, monitor, manage, or create wetlands. Including many methods usually found only in the peer-reviewed or gray literature, this 3-volume set fills a major niche for all professionals dealing with wetlands.
