Diffusion and Adoption of Information Technology Karlheinz Kautz, Jan Pries-Heje, 2013-06-05 It is well known that the introduction of a new technology in one organization not always produces the intended benefits Levine 1994 In many cases either the receivers do not reach the intended level of use or simply the technology is rejected because it does not match with the expectations true or false and the accepted psychological effort to use it The case of formal methods is a paradigmatic example of continual failures The published cases with problems or failures only constitute the visible part of a large iceberg of adoption cases It is difficult to get companies to openly express the problems they had however from the experience of the author failure cases are very common and they include any type of company Many reasons to explain the failures and in some cases the successes could be postulated however the experiences are not structured enough and it is

difficult to extract from them useful guidelines for avoiding future problems Generally speaking there is a trend to find the root of the problems in the technology itself and in its adequacy with the preexistent technological context Technocratic technology transfer models describe the problems in terms of these aspects Although it is true that those factors limit the probability of success there is another source of explanations linked to the individuals and working teams and how they perceive the technology

Creating Value with Science and Technology Eliezer Geisler, 2001-08-30 Do science and technology create value for society and the economy and how might one go about measuring it How do we evaluate its benefits Can we even be certain that there are benefits Geisler argues that there are benefits and that they outweigh in value the negative impacts that inevitably accompany them His revolutionary new book goes on to show that they can also be measured and evaluated and in one volume all of the existing knowledge on how to do it is compiled then Geisler's own methods are offered The result is a compelling argument that the value of science and technology in our lives has indeed been positive and that the economic well being of all individuals organizations and nations rests upon them Geisler starts off by describing his conceptual framework for the evaluation of science and technology and the impact and benefits that proceed from them He discusses the nature of evaluation in general terms and then in the specific context of science technology and innovation together He reviews the state of our present knowledge and assesses the nature of value creation itself Throughout Geisler remains fixed on his driving thesis Although there are certainly some negative impacts from science and technology on the whole the results of its outputs are positive He shows how they have

contributed to a range of activities and institutions particularly to the improvement of health and human welfare worldwide Finally after discussing the theories of evaluation he gets down to the practice providing readers with a way to assess science and technological innovations for themselves
