Tracking Truth Knowledge Evidence And Science:

Tracking Truth Sherrilyn Roush, 2005-11-10 Tracking Truth presents a unified treatment of knowledge evidence and epistemological realism and anti realism about scientific theories A wide range of knowledge related phenomena especially but not only in science strongly favour the idea of tracking as the key to what makes something knowledge A subject who tracks the truth an idea first formulated by Robert Nozick has the ability to follow the truth through time and changing circumstances Epistemologists rightly concluded that Nozick s theory was not viable but a simple revision of that view is not only viable but superior to other current views In this new tracking account of knowledge in contrast to the old view knowledge has the property of closure under known implication and troublesome counterfactuals are replaced with well defined conditional probability statements Of particular interest are the new view s treatment of skepticism reflective knowledge lottery propositions knowledge of logical truth and the question why knowledge is power in the Baconian sense Ideally evidence indicates a hypothesis and discriminates it from other possible hypotheses This is the idea behind a tracking view of evidence and Sherrilyn Roush provides a defence of a confirmation theory based on the Likelihood Ratio The accounts of knowledge and evidence she offers provide a deep and seamless explanation of why having better evidence makes one more likely to have knowledge Roush approaches the question of epistemological realism about scientific theories through the question what is required for evidence and rejects both traditional realist and traditional anti realist positions in favour of a new position which evaluates realist claims in a piecemeal fashion according to a general standard of evidence The results show that while anti realists were immodest in declaring a priori what science could not do realists were excessively sanguine about how far our actual evidence has so far taken us

question of epistemological realism about scientific theories through the question what is required for evidence and rejects both traditional realist and traditional anti realist positions in favour of a new position which evaluates realist claims in a piecemeal fashion according to a general standard of evidence The results show that while anti realists were immodest in declaring a priori what science could not do realists were excessively sanguine about how far our actual evidence has so far taken us

Evidence, Respect and Truth Liat Levanon, 2022-11-03 Can we rely solely on statistics when we judge what is true and just This book takes a holistic approach to addressing this question It considers the legal trial as its paradigmatic case study before analysing a wide range of different cases including profiling the use of algorithms to predict students grades and the authorisation of automated cars The book suggests that when we make judgements about the truth or about justice approximations are not good enough Truth and justice are uncompromising They must be so because the value that underlies them both is respect and respect takes no compromise Thus in the search for truth as in the search for justice a body of evidence that imposes a statistical compromise will not do Only evidence that in principle allows reaching the truth and doing justice is good evidence Once such evidence has been traced the burden is on us to make good use of the evidence and reach truth and justice We might or might not succeed but once we have done our best on evidence that allows success our judgements are justified and as such they can resolve conflicts over the truth and over justice

Explaining Knowledge Rodrigo Borges, Claudio de Almeida, Peter D. Klein, 2017-11-24 The Gettier Problem has shaped most of the fundamental debates in epistemology for more than fifty years Before Edmund Gettier published his famous 1963 paper it was generally presumed that knowledge was equivalent to true belief supported by adequate evidence Gettier presented a powerful challenge to that presumption This led to the development and refinement of many prominent epistemological theories for example defeasibility theories causal theories conclusive reasons theories tracking theories epistemic virtue theories and knowledge first theories The debate about the appropriate use of intuition to provide evidence in all areas of philosophy began as a debate about the epistemic status of the Gettier intuition The differing accounts of epistemic luck are all rooted in responses to the Gettier Problem The discussions about the role of false beliefs in the production of knowledge are directly traceable to Gettier's paper as are the debates between fallibilists and infallibilists Indeed it is fair to say that providing a satisfactory response to the Gettier Problem has become a litmus test of any adequate account of knowledge even those accounts that hold that the Gettier Problem rests on mistakes of various sorts This volume presents a collection of essays by twenty six experts including some of the most influential philosophers of our time on the various issues that arise from Gettier's challenge to the analysis of knowledge Explaining Knowledge sets the agenda for future work on the central problem of epistemology

New Perspectives on Epistemic Closure Matthew Jope, Duncan Pritchard, 2022-09-30 This volume brings together new research on the topic of epistemic closure from both leading philosophers and emerging voices in epistemology It connects epistemic closure principles to related themes in epistemology such as scepticism dogmatism evidentialism epistemic logic and modal epistemology Epistemic closure is of central importance to contemporary epistemology so much so that no epistemology is complete without an answer to the question of where it stands on the issue The chapters in this book touch on the central themes of closure and transmission and argue for and against different closure and transmission principles The contributors address issues such as whether knowledge and justification are closed under deductive entailment whether scepticism can be properly contained by restricting closure principles whether justification for a set of premises can fail to transmit across inference to a conclusion

Johan van Benthem on Logic and Information Dynamics Alexandru Baltag, Sonja Smets, 2014-08-27

This book illustrates the program of Logical Informational Dynamics Rational agents exploit the information available in the world in delicate ways adopt a wide range of epistemic attitudes and in that process constantly change the world itself Logical Informational Dynamics is about logical systems putting such activities at center stage focusing on the events by which we acquire information and change attitudes Its contributions show many current logics of information and change at work often in multi agent settings where social behavior is essential and often stressing Johan van Benthem's pioneering work in establishing this program However this is not a Festschrift but a rich tapestry for a field with a wealth of strands of its own The reader will see the state of the art in such topics as information update belief change preference learning over time and strategic interaction in games Moreover no tight boundary has been enforced and some chapters add more general mathematical or philosophical foundations or links to current trends in computer science The theme of this book lies at the interface of many disciplines Logic is the main methodology but the various chapters cross easily between mathematics computer science philosophy linguistics cognitive and social sciences while also ranging from pure theory to empirical work Accordingly the authors of this book represent a wide variety of original thinkers from different research communities And their interconnected themes challenge at the same time how we think of logic philosophy and computation Thus very much in line with van Benthem's work over many decades the volume shows how all these disciplines form a natural unity in the perspective of dynamic logicians broadly conceived exploring their new themes today And at the same time in doing so it offers a broader conception of logic with a certain grandeur moving its horizons beyond the traditional study of consequence relations

accessible way This textbook is an invaluable guide to contemporary epistemology *Rationality and Belief* Ralph Wedgwood, 2023 This book gives a general theory of rational belief Although it can be read by itself is a sequel to the author's previous book *The Value of Rationality* Oxford 2017 It takes the general conception of rationality that was defended in that earlier book and combines it with an account of the varieties of belief and of what it is for these beliefs to count as correct to develop an account of what it is for beliefs to count as rational According to this account rationality comes in degrees the degree to which one's beliefs count as rational is determined by their distance from a corresponding probability function where this distance is measured by those beliefs' expected degree of incorrectness according to the probability function the account also involves an explanation of what determines exactly which probability function plays this role in each case and of why this probability function should play this role In developing and defending this account new light is shed on several central epistemological issues These issues include the distinction between propositional and doxastic justification the debates between internalism and externalism and between foundationalism and coherentism the significance or lack of it of the notion of evidence the relationship between credences full belief inference and suspension of judgment the nature of the kind of possibility that is presupposed by the relevant sort of probability and whether rationality is diachronic so that the beliefs that it is rational for us to have now depend in part on the beliefs that we held in the past Finally some suggestions are made about how this theory bears on a range of further topics including the defeasibility of inference scepticism and the analysis of knowledge
