and therapies which are not faced by developers of more conventional therapies Understanding the many sources of variability can help reduce this variability and ensure consistent results The Forum on Regenerative Medicine hosted a public workshop on October 18 2018 in Washington DC to explore the various factors that must be taken into account in order to develop successful regenerative engineering products Invited speakers and participants discussed factors and sources of variability in the development and clinical application of regenerative engineering products characteristics of high quality products and how different clinical needs models and contexts can inform the development of a product to improve patient outcomes This publication summarizes the presentation and discussion of the workshop
