The Story of Science: Newton at the Center Joy Hakim, 2016-04-26 In volume two students will watch as Copernicus's systematic observations place the sun at the center of our universe to the dismay of establishment thinkers After students follow the achievements and frustrations of Galileo Kepler and Descartes they will appreciate the amazing Isaac Newton whose discoveries about gravity motion colors calculus and Earth's place in the universe set the stage for modern physics astronomy mathematics and chemistry In the three book *The Story of Science* series master storyteller Joy Hakim narrates the evolution of scientific thought from ancient times to the present With lively character driven narrative Hakim spotlights the achievements of some of the world's greatest scientists and encourages a familiar spirit of inquiry in readers The books include hundreds of color photographs charts maps and diagrams informative sidebars suggestions for further reading and excerpts from the writings of great scientists

Animating Black and Brown Liberation Michael Datcher, 2019-04-01 *Animating Black and Brown Liberation* introduces a vital new tool for reading American literatures Rooted in both ancient Egyptian ideas about life and cutting edge theories of animacy or levels of aliveness this tool anchoring enables Michael Datcher to examine the ways African American and Latinx literatures respond to and ultimately work to resist hegemonic forces of neoliberalism and state sponsored oppression Weaving together close readings and politically informed philosophical reflection Datcher considers the work of writer activists Toni Cade Bambara Cherr e Moraga Gloria Anzaldua June Jordan Salvador Plascencia and Ishmael Reed in light of theoretical interventions by Jane Bennett Mel Y Chen Bruno Latour Michel Foucault Paulo Freire and Erica R Edwards How he asks can cultural production positively influence Black and Brown material conditions and mobilize collective action off the page How can art based counterpublics provide a foundation for Black and Brown community organizing What emerges from Datcher s innovative analysis is a frank assessment of the links between embodied experiences of racialization as well as a distinctive vision of twentieth and twenty first century American literature as a repository of emancipatory strategies with real world applications

From Eternity to Here Sean Carroll, 2010-01-07 A rising star in theoretical physics offers his awesome vision of our universe and beyond all beginning with a simple question Why does time move forward Time moves forward not backward everyone knows you can t unscramble an egg In the hands of one of today s hottest young physicists that simple fact of breakfast becomes a doorway to understanding the Big Bang the universe and other universes too In *From Eternity to Here* Sean Carroll argues that the arrow of time pointing resolutely from the past to the future owes its existence to conditions before the Big Bang itself a period modern cosmology of which Einstein never dreamed Increasingly though physicists are going out into realms that make the theory of relativity seem like child s play Carroll s scenario is not only elegant it s laid out in the same easy to understand language that has made his group blog Cosmic Variance the most popular physics blog on the Net *From Eternity to Here* uses ideas at the cutting edge of theoretical physics to explore how properties of spacetime before the Big Bang can explain the flow of time we experience in our everyday lives Carroll suggests that we live in a baby universe part of a large family of universes in which many of our siblings experience an arrow of time running in the opposite direction It s an ambitious fascinating picture of the universe on an ultra large scale one that will captivate fans of popular physics blockbusters like *Elegant Universe* and *A Brief History of Time* Watch a Video

Energy and the Unexpected Keith James Laidler, 2002 From the steam engine to $E=mc^2$ and beyond the concept of energy offers an essential key to our understanding of the Universe In this entertaining and highly readable

book Professor Laidler explains the concept of energy and its characteristics as they have been discovered over the past two centuries Having looked at energy on a small scale and then on the scale of the Universe itself he shows the link with chaos theory according to which the unexpected is inevitable

The Heat Will Kill You First Jeff Goodell, 2023-07-11 INSTANT NEW YORK TIMES BESTSELLER SELECTED AS ONE OF THE BEST BOOKS OF THE YEAR BY NPR THE LOS ANGELES TIMES AND THE ECONOMIST FINALIST FOR THE L A TIMES BOOK PRIZE THE NEW YORK PUBLIC LIBRARY S HELEN BERNSTEIN AWARD FOR EXCELLENCE IN JOURNALISM AND THE PEN E O WILSON AWARD FOR LITERARY SCIENCE WRITING New York Times best selling journalist Jeff Goodell presents a masterful bracing David Wallace Wells examination of the impact that temperature rise will have on our lives and on our planet offering a vital new perspective on where we are headed how we can prepare and what is at stake if we fail to act When heat comes it s invisible It doesn t bend tree branches or blow hair across your face to let you know it s arrived The sun feels like the barrel of a gun pointed at you The world is waking up to a new reality wildfires are now seasonal in California the Northeast is getting less and less snow each winter and the ice sheets in the Arctic and Antarctica are melting fast Heat is the first order threat that drives all other impacts of the climate crisis And as the temperature rises it is revealing fault lines in our governments our politics our economy and our values The basic science is not complicated Stop burning fossil fuels tomorrow and the global temperature will stop rising tomorrow Stop burning fossil fuels in 50 years and the temperature will keep rising for 50 years making parts of our planet virtually uninhabitable It s up to us The hotter it gets the deeper and wider our fault lines will open *The Heat Will Kill You First* is about the extreme ways in which our planet is already changing It is about why spring is coming a few weeks earlier and fall is coming a few weeks later and the impact that will have on everything from our food supply to disease outbreaks It is about what will happen to our lives and our communities when typical summer days in Chicago or Boston go from 90 F to 110 F A heatwave Goodell explains is a predatory event one that culls out the most vulnerable people But that is changing As heatwaves become more intense and more common they will become more democratic As an award winning journalist who has been at the forefront of environmental journalism for decades Goodell s new book may be his most provocative yet explaining how extreme heat will dramatically change the world as we know it Masterfully reported mixing the latest scientific insight with on the ground storytelling Jeff Goodell tackles the big questions and uncovers how extreme heat is a force beyond anything we have reckoned with before

The Thermodynamics of Mathematical Representation Daniel J. Graham, 2025-06-30 Thermodynamics is the physical science surrounding work heat and relationships across fundamental quantities and situates itself near the center of multiple disciplines through its generality and timelessness Its laws required no rewriting after the twentieth century revolutions of quantum mechanics relativity and solid state physics just to name three subjects The nine chapters of this book make appeal to thermodynamic notions and laws to get under the hood of mathematics the language of the physical sciences without just echoing things best said and written in math books It takes a

system to learn about another system we all need thermometers voltmeters and other gadgets to get to know objects of interest But just as critical are the numbers and functions we put to the task however relegated they are to computers in the modern day for the heavy lifting To be sure mathematical representations like x^1 , 2^5 , 2^e etc and $f(x) = \sin x$ etc are never in physical contact with the solids liquids and gases that draw our attention but they are as impacted by the same natural laws as the lab apparatus itself This book shows how the thermodynamic laws impact our number systems The laws affirm that we have direct access to a vanishingly small fraction of the real numbers They further establish that the real numbers present a maximum evolved system impacting all matters of computation graphing differentiation and integration For completeness one of the chapters includes cases where the thermodynamic laws have little if anything constructive to say about representations in mathematics This book presents a novel perspective to students and teachers in the physical sciences biology and mathematics with the goal of enriching classroom and seminar hours The chapters are self contained and written informally and readers with rudimentary knowledge of energy numbers and functions should handle the material well

The Found and the Made Dan Bruiger, 2017-07-05 This book critically examines how mathematical modelling shapes and limits a scientific approach to the natural world and affects how society views nature It questions concepts such as determinism reversibility equilibrium and the isolated system and challenges the view of physical reality as passive and inert Dan Bruiger argues that if nature is real it must transcend human representations In particular it can be expected to self organize in ways that elude a mechanist treatment This interdisciplinary study addresses several key areas the crisis in modern physics and cosmology the limits and historical psychological and religious roots of mechanistic thought and the mutual effects of the scientific worldview upon society's relationship to nature Bruiger demonstrates that there is still little place outside biology for systems that actively self organize or self define Instead of appealing to multiverses to resolve the mysteries of fine tuning he suggests that cosmologists look toward self organizing processes He also states that physics is hampered by its external focus and should become more self reflective If scientific understanding can go beyond a stance of prediction and control it could lead to a relationship with nature more amenable to survival The Found and the Made fills a void between popular science writing and philosophy It will appeal to naturalists environmentalists science buffs professionals and students of cultural history evolutionary psychology gender studies and philosophy of mind

Engineering Thermodynamics and 21st Century Energy Problems Donna Riley, 2022-05-31 Energy is a basic human need technologies for energy conversion and use are fundamental to human survival As energy technology evolves to meet demands for development and ecological sustainability in the 21st century engineers need to have up to date skills and knowledge to meet the creative challenges posed by current and future energy problems Further engineers need to cultivate a commitment to and passion for lifelong learning which will enable us to actively engage new developments in the field This undergraduate textbook companion seeks to develop these capacities in tomorrow's engineers in order to provide for future

energy needs around the world This book is designed to complement traditional texts in engineering thermodynamics and thus is organized to accompany explorations of the First and Second Laws fundamental property relations and various applications across engineering disciplines It contains twenty modules targeted toward meeting five often neglected ABET outcomes ethics communication lifelong learning social context and contemporary issues The modules are based on pedagogies of liberation used for decades in the humanities and social sciences for instilling critical thinking and reflective action in students by bringing attention to power relations in the classroom and in the world This book is intended to produce a conversation and creative exploration around how to teach and learn thermodynamics differently Because liberative pedagogies are at their heart relational it is important to maintain spaces for discussing classroom practices with these modules and for sharing ideas for implementing critical pedagogies in engineering contexts The reader is therefore encouraged to visit the book s blog Table of Contents What and Why The First Law Making Theory Relevant The Second Law and Property Relations Thinking Big Picture about Energy and Sustainability **Architecture Follows**
