Fundamentals series represent the expertise of hundreds of water quality professionals. They align with updated Need to Know Criteria from the Association of Boards of Certification and are based on WEF's extensive existing resource collection including Operation of Water Resource Recovery Facilities MOP 11 [Handbook for Waterworks Operator Certification](#) Frank R. Spellman, 2000-11-06. This three volume series is designed to prepare waterworks operators for certification and licensure exams. Volume 1 is the only such volume based on the recently amended Safe Drinking Water Act and provides the tools to understand the microbiological and chemical hazards of water in light of the quality standards treatment plants must achieve. With its clear explanations of basic math, hydraulics, electricity, and plant processes, it prepares the drinking water plant operator for further study of all aspects of drinking water operations, including purification and distribution. Abundant cases, problems, and a full scale battery of examination questions enable the reader to apply the book's lessons into practice both on the job and in the classroom. Volume 2 is designed to give the experienced operator the means to advance to higher levels. Its content has been selected and organized in accord with SDWA requirements for the continuing education of operators. After reviewing basic math, this volume presents information and calculations for critical areas of operator responsibility from intake, disinfection, and pumping through odor control and distribution. Self check questions and a final examination enable the reader to monitor progress and prepare for certification and licensure testing. Volume 3 is a forthcoming title for the year 2001 and is intended for advanced operators. It represents an in depth treatment of plant processes and operations and stresses troubleshooting and problem solving.
