Kollman, 2022-04-28 Amber is the collective name for a suite of programs that allow users to carry out molecular dynamics simulations particularly on biomolecules None of the individual programs carries this name but the various parts work reasonably well together and provide a powerful framework for many common calculations The term Amber is also used to refer to the empirical force fields that are implemented here It should be recognized however that the

code and force field are separate several other computer packages have implemented the Amber force fields and other force fields can be implemented with the Amber programs Further the force fields are in the public domain whereas the codes are distributed under a license agreement The Amber software suite is divided into two parts AmberTools22 a collection of freely available programs mostly under the GPL license and Amber22 which is centered around the pmemd simulation program and which continues to be licensed as before under a more restrictive license Amber22 represents a significant change from the most recent previous version Amber20 We have moved to numbering Amber releases by the last two digits of the calendar year so there are no odd numbered versions Please see <https://ambermd.org> for an overview of the most important changes AmberTools is a set of programs for biomolecular simulation and analysis They are designed to work well with each other and with the regular Amber suite of programs You can perform many simulation tasks with AmberTools and you can do more extensive simulations with the combination of AmberTools and Amber itself Most components of AmberTools are released under the GNU General Public License GPL A few components are in the public domain or have other open source licenses See the README file for more information
