

Note Taking Guide - Episode 1301

Electromagnetic waves:

- - Consist of changing magnetic and electric fields moving through space at speed of light (3.0×10^8)
- - are produced by vibrating charged particles
- - do not require a medium
-

Electromagnetic spectrum:

- - range of frequencies of electromagnetic waves
- - as frequency increases, wavelength decreases
- - as frequency increases, energy of wave increases
-

Radio Waves:

- have the lowest frequency and the longest Wavelength.
- includes TV waves, which are vhf (very high frequency) or uhf (ultra high frequency), and radar, with highest frequency
- Each radio station broadcasts at a set frequency. Radio waves are the bcsb waves for sound.
- Sound waves are converted into electrical signals and change (modulate) the carrier waves.
am - amplitude modulation
fm - frequency modulation
- In receiver antennae, electrons are made to vibrate sympathetically at set frequency (concept of sympatheticity)

Littel, 2004 **Affordances and Constraints of Mobile Phone Use in English Language Arts Classrooms** Moran, Clarice M., 2020-12-25 The use of phones in the classroom is a controversial topic that receives a variety of reactions and can have political ramifications In various school districts across different states as well as in some countries cell phone usage has been banned in the classroom to combat what administrators say is a distracted student population However research demonstrates that cell phones can have a positive effect on learning and engagement Instead of banning cell phones some teachers have found ways to incorporate educational apps gaming apps and social media into course materials Although much research has emerged involving the integration of technology and digital literacies in English language arts ELA classrooms mobile phone use as a discrete construct has not been explored widely *Affordances and Constraints of Mobile Phone Use in English Language Arts Classrooms* aims to shine a light on the controversial topic of mobile phones in the English language arts classroom focusing on comparing the opportunities that they afford students as well as the negative effects they can have on learning The chapters within this book examine learning outcomes best practices and practical applications for using mobile phones in ELA and adds to the body of literature on mobile phone use in secondary classrooms in general standing as a unique resource on mobile phones in the language arts curriculum While highlighting topics that include gaming applications online learning student engagement and classroom management this book is ideally designed for inservice and preservice teachers administrators teacher educators practitioners stakeholders researchers academicians and students who are interested in learning more about the pluses and minuses of mobile phone use in ELA Light-Matter Interaction John Weiner, Frederico Nunes, 2012-12-06 This book draws together the essential elements of classical electrodynamics surface wave physics plasmonic materials and circuit theory of electrical engineering to provide insight into the essential physics of nanoscale light matter interaction and to provide design methodology for practical nanoscale plasmonic devices A chapter on classical and quantal radiation also highlights the similarities and differences between the classical fields of Maxwell's equations and the wave functions of Schrödinger's equation The aim of this chapter is to provide a semiclassical picture of atomic absorption and emission of radiation lending credence and physical plausibility to the rules

of standard wave mechanical calculations The structure of the book is designed around five principal chapters but many of the chapters have extensive complements that either treat important digressions from the main body or penetrate deeper into some fundamental issue Furthermore at the end of the book are several appendices to provide readers with a convenient reference for frequently occurring special functions and explanations of the analytical tools such as vector calculus and phasors needed to express important results in electromagnetics and waveguide theory *Modules*, 2005 *Radar Scattering from Modulated Wind Waves* G.J. Komen, W.A. Oost, 2012-12-06 Ten years ago de Loor and co workers at TNO The Netherlands were the first to report bottom topography patterns in real aperture radar RAR images of the southern North Sea At that time this was a real puzzle The skin depth of microwaves for sea water is only of the order of centimeters while the sea bottom is about 20 meters below the surface Electromagnetic radiation therefore cannot probe the bottom directly Similar phenomena were found in radar imagery from SEASAT and SIR A/B synthetic aperture radars SARs of Nantucket Shoals the English Channel and many other coastal areas Since then theory and ocean field experiments Le Phelps Bank Georgia Straits SARSEX TOWARD FASINEX etc have advanced our understanding considerably We now know that these surface signatures are the results of surface currents perturbed by the bottom topography which refract the propagation and modulate the energy of short surface waves so as to cause microwave backscatter power variations Hence any large scale ocean features containing nonuniform surface currents i e internal waves eddies fronts etc will cause similar manifestations in the radar imagery by means of current wave microwave interactions Observations confirm this Scientific and Technical Aerospace Reports, 1980 *Multiple Scattering Theory for Spectroscopies* Didier Sébilleau, Keisuke Hatada, Hubert Ebert, 2018-04-05 This edited book based on material presented at the EU Spec Training School on Multiple Scattering Codes and the following MSNano Conference is divided into two distinct parts The first part subtitled basic knowledge provides the basics of the multiple scattering description in spectroscopies enabling readers to understand the physics behind the various multiple scattering codes available for modelling spectroscopies The second part extended knowledge presents state of the art short chapters on specific subjects associated with improving of the actual description of spectroscopies within the multiple scattering formalism such as inelastic processes or precise examples of modelling *Resources in Education*, 2001 Interdimensional Travel Guide Scarlett Stoyer, This comprehensive book explores the fascinating realms of interdimensional travel delving into its concepts scope and historical foundations It covers various methods and modalities for traversing between dimensions alongside ethical considerations and potential risks involved The book examines cutting edge theories such as quantum mechanics multiverse theories string theory and brane cosmology to explain the physics behind parallel universes and the anomalies they present It offers detailed insights into designing and engineering interdimensional portals including navigational instruments safety features and troubleshooting techniques Additionally the text addresses realm mapping classification of biological diversity and environmental hazards providing strategies for safe

encounters and resource management It discusses legal frameworks international laws and ethical guidelines governing interdimensional exploration emphasizing responsibility and societal impact Practical topics such as travel planning resource allocation communication across realms and training exercises are also covered to prepare travelers and researchers The book highlights emerging materials technological advancements and the integration of artificial intelligence in interdimensional systems It features case studies lessons learned from past missions and future technological impacts Overall this book serves as an essential resource for scientists explorers ethicists and policymakers interested in understanding and responsibly advancing interdimensional travel and research Science & Stories Hilarie N.
