Cultural Ways of Worldmaking Vera Nünning, Ansgar Nünning, Birgit Neumann, 2010-06-29 Taking as its point of departure Nelson Goodman's theory of symbol systems as delineated in his seminal book *Ways of Worldmaking* this volume gauges the possibilities and perspectives offered by the worldmaking approach as a model for the study of culture Its main objectives are to explore the usefulness and scope of the approach for the study of culture and to supplement Goodman's philosophy of worldmaking with a number of complementary disciplinary perspectives literary and cultural approaches and new questions and applications It focuses on three key issues or concepts which illuminate ways of worldmaking and their interdisciplinary relevance and ramifications viz 1 theoretical approaches to ways of worldmaking 2 the impact of media on ways of worldmaking and 3 narratives as ways of worldmaking The volume serves to demonstrate how specific media and narratives affect the worlds that are created and shows how these worlds are established as socially relevant It also illustrates the extent to which ways of worldmaking are imbued with cultural values and thus inevitably implicated in power relations

Against Relativism James Franklin Harris, 1992 Recent decades have witnessed the extraordinary growth of radical relativism a doctrine which now dominates the entire culture from popular music to journalism and from religion to school curricula According to the radical relativist creed any proposition can be true or false in relation to a chosen framework the evaluation of fundamental theories or paradigms is beyond argument there are no universal standards of rationality and methodologically Anything goes As James Harris explains in *Against*

Relativism the new relativism undoes the work of the Enlightenment and inevitably leads to the conclusion that Galileo was wrong to insist that the Earth indeed moves Success for relativism has come from many philosophical schools both Analytic and Continental Among the sources of the new relativism are the collapse of Logical Positivism and the shift within anthropology from a linear evolutionary model to numerous models for understanding human culture In this detailed critique Professor Harris has selected the strongest and most plausible arguments for relativism within contemporary academic philosophy He turns the techniques of relativism against relativism itself showing that it is ultimately self refuting or otherwise ineffectual He demonstrates that Quine s rejection of the analytic synthetic distinction appeals to the very analytic truths Quine tries to dispel that Kuhn s celebrated account of paradigms must be either self refuting or unintelligible that Rorty cannot avoid presupposing the epistemological principles he attacks and that although feminist criticisms of science exert a welcome corrective attempts to develop a distinctively feminist science are misconceived and unhelpful to feminism In all these discussions the author explains the arguments he is criticizing for the benefit of the non specialist reader so that this work can serve as a partisan but fair introduction to some of the most important of present day philosophy

Theories and Things Willard Van Orman Quine,1981 Here are the most recent writings some of them unpublished of the preeminent philosopher of our time Quine is always whatever his subject an elegant writer witty precise and forceful Admirers of his earlier books will welcome this new volume

Futures of the Study of Culture Doris Bachmann-Medick,Jens Kugele,Ansgar Nünning,2020-08-10 How can we approach possible but unknown futures of the study of culture This volume explores this question in the context of a changing global world The contributions in this volume discuss the necessity of significant shifts in our conceptual and epistemological frameworks Taking into account changing institutional research settings the authors develop pathways to future cultural research

Culture, Cognition, Narrative Vera Nünning,Ansgar Nünning,2025-11-14 Although it is well known that narrative impacts our modes of assessing and interpreting the world as well as the creation of cultural identities and cultural communities there is little research on the way in which cognition culture and narratives intersect Cultural narratology usually focuses on the relation between culture and narrative while cognitive narratology explores the relation between cognition and narrative However the three concepts reciprocally influence each other narratives shape cognition just as cognitive frames and processes shape narratives Similarly the culture we belong to informs our cognitive processes and the way we perceive interpret and react to our environment Culture and narrative also impact each other in myriad ways Narratives are therefore at the centre of this volume and each chapter deals with narrative either as a cognitive or performative tool relating it to either cognition or culture or to both The volume also explores social practices of real world storytelling for instance in discourses on migration and the cognitive dimension of cultures that narratives provide access to The latter includes shared self concepts schemata and cultural models This interdisciplinary volume builds conceptual bridges between cultural studies cognitive theory and narrative theory

The Critical Turn in Tourism Studies Irena Ateljevic,Annette Pritchard,Nigel Morgan,2007-03-15 New approaches to tourism study demonstrate a notable critical turn a shift in thought that emphasises interpretative and critical modes of tourism inquiry The chapters in this volume reflect this emerging critical school of tourism studies and represent a coordinated effort of tourism scholars whose work engages innovative research methodologies Since such work has been dispersed across a variety of tourism related and other research fields this book responds to a pressing need to consolidate recent advances in a single text Adopting a broad definition of criticality the contributors seek to find fresh ways of theorising tourism by locating the phenomenon in its wider

political economic cultural and social contexts The collection addresses the power relations underpinning the production of academic knowledge presents a range of qualitative data collection methods which confront the field's dominant post-positivist approaches foregrounds the emotional dynamics of research relations and explores the personal the political and the situated nature of research journeys The book has been divided into two parts with the essays in the first part establishing a context specific framework for engaging philosophical and theoretical debates in contemporary tourism enquiry The second set of essays then present discuss and critique specific methodologies research techniques methods of interpretation and writing strategies all of which are in some sense illustrative of critical tourism research Contributors range from postgraduate students to established academics and are drawn from both the geopolitical margins and the powerbases of the tourism academy Their various relationships with the English speaking academy thus range from relative outsider to well positioned insider and as a result their essays are reflective of a range of locations within the complexly spun web of academic power relations and social divisions

Capdevila-Werning, 2013-10-15 American philosopher Nelson Goodman 1906-1998 was one of the foremost analytical thinkers of the twentieth century with groundbreaking contributions in the fields of logic philosophy of science epistemology and aesthetics This book is an introduction to the aspects of Goodman's philosophy which have been the most influential among architects and architectural theorists Goodman specifically discussed architecture in his major work on aesthetics *The Languages of Art: An Approach to a Theory of Symbols* 1968 and in two essays *How Buildings Mean* 1985 and *On Capturing Cities* 1991 His main philosophical notions in *Ways of Worldmaking* 1978 also apply well to architecture Goodman's thought is particularly attractive because of its constructive aspect there is not a given and immutable world but both knowledge and reality are constantly built and rebuilt Whereas other theories such as deconstruction implicitly entail an undoing of modern precepts Goodman's conception of world making offers a positive constructive way to understand how a plural reality is made and remade Goodman's approach to architecture is not only relevant thinking in providing new insights to understanding the built environment but serves also as an illustration of analytical thinking in architecture This book shows that the methods concepts and ways of arguing characteristic of analytical philosophy are helpful tools to examine buildings in a novel and fruitful way and they will certainly enhance the architect's critical skills when designing and thinking about architecture

Teen Boys and their Smartphones as Worldmaking Devices John Magnus R. Dahl, 2025-07-16 This book is about how teen boys use their smartphones to create a world for themselves and their peers Based on an ethnographic fieldwork spanning two years and following six teenage boys on and offline the book investigates what kind of worlds these boys are making and how It explores the ways in which teen boys connect with other people and express themselves how they gain agency and make shared worlds It also asks to what extent this worldmaking is shaped by the opportunities and constraints of technology as well as by social and cultural patterns and the individual existential projects of its creators A key finding of the book is how smartphone technology offers boys belonging to an ethnocultural or sexual minority new opportunities and agency This book sheds much needed light on how the smartphone impacts teenage lives and breaks new ground with its focus on boys and by introducing the worldmaking perspective inspired by the thinking of Hannah Arendt to the study of digital lives

Models and World Making Annabel Jane Wharton, 2022-01-14 From climate change forecasts and pandemic maps to Lego sets and Ancestry algorithms models encompass our world and our lives In her thought provoking new book Annabel Wharton begins with a definition drawn from the quantitative sciences and the philosophy of science but holds that history and critical cultural theory are essential to a fuller understanding of modeling Considering changes in the medical body model and the architectural model from the Middle Ages to the twenty first century Wharton demonstrates the ways in which all models are historical and political Examining how cadavers have been described exhibited and visually rendered she highlights the historical dimension of the modified body and its depictions Analyzing the varied reworkings of the Holy Sepulchre in Jerusalem including by monumental commanderies of the Knights Templar Alberti's Rucellai Tomb in Florence Franciscans olive wood replicas and video game renderings she foregrounds the political force of architectural representations And considering black boxes instruments whose inputs we control and whose outputs we interpret but whose inner workings are beyond our comprehension she surveys the threats posed by such opaque computational models warning of the dangers that models pose when humans lose control of the means by which they are generated and understood Engaging and wide ranging *Models and World Making* conjures new ways of seeing and critically evaluating how we make and remake the world in which we live

Relativism Antti Hautamäki, 2020-01-28 This book offers new insights into truth knowledge and reality It details a unique approach to epistemological relativism based on the concept of points of view In a point of view an aspect represents an object for a subject By applying this concept of points of view the author develops a consistent and adequate form of relativism called viewpoint relativism according to which epistemic questions like Is X true or justified or existing are viewpoint dependent The monograph examines central issues related to epistemological relativism It analyzes major arguments pro and con from different opinions The author presents the arguments of well known philosophers These include such thinkers as Paul Boghossian John Dewey Nelson Goodman Martin Kusch C I Lewis John MacFarlane Hilary Putnam W V O Quine Richard Rorty John Searle and Ludwig Wittgenstein In the process the author deconstructs the standard account of correspondence theory of truth Viewpoint relativism is a moderate relativism which is not subjected to standard criticism of extreme relativism This book argues that knowledge creation presupposes openness to different points of view and their comparison It also explores the broader implications of viewpoint relativism into current debate about truth in society The

author defends a critical relativism which accepts pluralism but is critical against all points of view In the conclusion he explores the relevance of viewpoint relativism to democracy by showing that the main threat of modern democratic society is not pluralism but absolutism and fundamentalism
