Tsunamis Antony Joseph, 2011-01-19 The devastating impacts of tsunamis have received increased focus since the Indian Ocean tsunami of 2004 the most destructive tsunami in over 400 years of recorded history The tsunamis that occurred as a result of the earthquake in Japan in March 2011 further emphasized the need for detection monitoring and early warning technologies This professional reference is the first of its kind it provides a globally inclusive review of the current state of tsunami detection technology and will be a much needed resource for oceanographers and marine engineers working to upgrade and integrate their tsunami warning systems It focuses on the two main tsunami warning systems TWS International and Regional Featured are comparative assessments of detection monitoring and real time reporting technologies The challenges of detection through remote measuring stations are also addressed as well as the historical and scientific aspects of tsunamis Offers readers the only source of practical content on the technological details of the subject Written by a tsunami detection and monitoring expert who has 32 years of experience in the field Companion web site featuring multi media components timely updates on fast paced technological developments and an online forum where scientists can exchange ideas discuss technological updates and provide the author with valuable feedback **Post-Tsunami Hazard V.**

Santiago-Fandiño, Y.A. Kontar, Y. Kaneda, 2014-10-29 This monograph focuses on a variety of topics related to reconstruction and restoration in post tsunami conditions Aspects such as coastal engineering early warning systems and technological approaches urban planning and settlements relocation socio economic redevelopment and policy coastal ecosystems and agricultural redevelopment as well as pollution assessment are included The reader will benefit from the various case studies drawn from a number of countries hit by the 2004 tsunami in the Indian Ocean and the Great East Earthquake and Tsunami of March 2011 in Japan This book will appeal to scientists and scholars decision makers students and practitioners interested in post tsunami reconstruction and restoration processes **Nanotechnology-Based Smart Remote Sensing Networks**

**for Disaster Prevention** Adil Denizli, Marcelo S. Alencar, Tuan Anh Nguyen, David Motaung, 2022-05-29 Nanotechnology Based Smart Remote Sensing Networks for Disaster Prevention outlines how nanotechnology and space technology could be applied for the detection of disaster risks in early stages using cheap sensors cheap constellations of low Earth orbit LEO satellites and smart wireless networks with artificial intelligence AI tools Nanomaterial based sensors nanosensors can offer several advantages over their micro counterparts such as lower power or self powered consumption high sensitivity lower concentration of analytes and smaller interaction distances between the object and the sensor Besides this with the support of AI tools such as fuzzy logic genetic algorithms neural networks and ambient intelligence sensor systems are becoming smarter when a large number of sensors are used This book is an important reference source for materials scientists engineers and environmental scientists who are seeking to understand how nanotechnology based solutions can help mitigate natural disasters Shows how nanotechnology based solutions can be combined with space technology to provide

more effective disaster management solutions Explores the best materials for manufacturing different types of nanotechnology based remote sensing devices Assesses the challenges of creating a nanotechnology based disaster mitigation system in a cost effective way      **Geoethics** Max Wyss,Silvia Peppoloni,2014-11-13 Edited by two experts in the area Geoethics Ethical Challenges and Case Studies in Earth Sciences addresses a range of topics surrounding the concept of ethics in geoscience making it an important reference for any Earth scientist with a growing concern for sustainable development and social responsibility This book will provide the reader with some obvious and some hidden information you need for understanding where experts have not served the public what more could have been done to reach and serve the public and the ethical issues surrounding the Earth Sciences from a global perspective Written by a global group of contributors with backgrounds ranging from philosopher to geo practitioner providing a balance of voices Includes case studies showing where experts have gone wrong and where key organizations have ignored facts wanting assessments favorable to their agendas Provides a much needed basis for discussion to guide scientists to consider their responsibilities and to improve communication with the public      Natural Hazards and Disasters Bimal Kanti Paul,2020-12-07 This two volume encyclopedia provides the science behind such heart pumping geophysical hazards as volcanic eruptions earthquakes cyclones and floods as well as authoritative entries on notable natural disasters around the world and the agencies that help those they impact Natural Hazards and Disasters explores the sometimes harsh effects of nature on human life The set discusses the physical science behind specific types of hazards and disasters such as blizzards and tsunamis their impact on our lives how damage is mitigated or prevented recovery and reconstruction and the current research and technology used for managing or even eliminating the hazards Written by experts in the field the set also explores a variety of extreme events from around the world including the 2010 2011 Christchurch Earthquakes New Zealand the 2017 2018 Thomas Fire United States and the 2018 Kerala Floods India Also covered are the world s major international and nonprofit aid agencies like the Salvation Army and Oxfam that assist disaster victims      **Technology Guide** Hans-Jörg Bullinger,2009-05-10 Use this technology guide to find descriptions of today s most essential global technologies Clearly structured and simply explained the book s reference format invites even the casual reader to explore the stimulating innovative ideas it contains

**Tsunamis** Horace M. Karling,2005 The phenomenon called a tsunami soo NAHmee is a series of travelling ocean waves of extremely long length generated primarily by earthquakes occurring below or near the ocean floor Underwater volcanic eruptions and landslides can also generate tsunamis In the deep ocean the tsunami waves propagate across the deep ocean with a speed exceeding 800 kilometres per hour km 500 miles per hour and a wave height of only a few tens of centimetres 1 foot or less Tsunami waves are distinguished from ordinary ocean waves by their great length between wave crests often exceeding a 100 km 60 miles or more in the deep ocean and by the time between these crests ranging from 10 minutes to an hour As they reach the shallow waters of the coast the waves slow down and the water can pile up into a wall of destruction

tens of meters 30 ft or more in height The effect can be amplified where a bay harbour or lagoon funnels the wave as it moves inland Large tsunamis have been known to rise over 30 meters 100 ft Even a tsunami 3 6 meters m high can be very destructive and cause many deaths and injuries near the ocean During the 1990s over 4 000 people were killed by 10 tsunamis including more than 1000 lives lost in the 1992 Flores region Indonesia and 2200 lives in the 1998 Aitape Papua New Guinea tsunamis Property damage was nearly one billion United States US dollars Although 80 per cent of the tsunamis occur in the Pacific they can also threaten coastlines of countries in other regions including the Indian Ocean Mediterranean Sea Caribbean region and even the Atlantic Ocean Tsunamis ,2005 Recently some in Congress have become concerned about the possible vulnerability of U S coastal areas to tsunamis and about the adequacy of early warning for coastal areas of the western Atlantic Ocean Those concerns stem from the December 26 2004 tsunami that devastated many coastal areas around the northern Indian Ocean where few tsunami early warning systems currently operate Caused by a strong underwater earthquake off the coast of Sumatra Indonesia the tsunami disaster is estimated to claimed at least 150 000 lives Affected nations assisted by others are pursuing a multilateral effort to develop a detection and warning network for the Indian Ocean Also some Members of Congress and the Bush Administration have proposed a tsunami warning network for the U S Atlantic seaboard Although instrumentation costs could run into the millions of dollars existing weather buoys and state and local coastal and ocean observation networks might serve as possible platforms for the instrumentation The European Union Canada and the United States may consider multilateral efforts to establish coverage for the North Atlantic
