**Security in the Bubble** Christine Hentschel, 2015-08-08 Focusing on the South African city of Durban Security in the Bubble looks at spatialized security practices engaging with strategies and dilemmas of urban security governance in cities around the world While apartheid was spatial governance at its most brutal postapartheid South African cities have tried to reinvent space using it as a positive technique of governance Christine Hentschel traces the contours of two emerging urban regimes of governing security in contemporary Durban handsome space and instant space Handsome space is about aesthetic and affective communication as means to making places safe Instant space on the other hand addresses the crime related personal navigation systems employed by urban residents whenever they circulate through the city While handsome space embraces the powers of attraction instant space operates through the powers of fleeing In both regimes security is conceived not as a public good but as a situational experience that can No longer reducible to the after pains of racial apartheid this city's fragmentation is now better conceptualized according to Hentschel as a heterogeneous ensemble of bubbles of imagined safety *Automotive News*, **Autocar**, 2004

**Build To Order** Glenn Parry, Andrew Peter Graves, 2008-07-23 Over the past 100 years the European Automotive Industry has been repeatedly challenged by best practice First by the United States through the development of mass production pioneered by Henry Ford and more recently by lean production techniques as practised by the leading Japanese producers particularly Toyota It has consistently risen to these challenges and has shown it can compete and even outperform its competitors with world class products However the European industry is now faced with growing competition

and growth from new emerging low cost countries and needs to re define its competitive advantage to remain at the forefront of the sector Automotive growth is driven by two factors new markets and new technologies Global competition is increasing with technology and product differentiation becoming the most important sales factors but with continued cost pressure Within the market the winners will be more profitable and the losers will disappear The Automotive Industry makes a significant contribution to the socio economic fabric of the European Union Manufacturing output represents 700 billion and research and development spending 24 billion European automotive suppliers number 5000 member companies and represent 5 million employees and generate 500 billion in revenues These are significant figures that generate wealth and high value employment within the EU European firms must consistently improve their competitive position to ensure that the industry does not migrate to growing new markets
