Tsunamis Michele Ingber Drohan,2005-10-30 This high interest Science title is one of the 4 titles sold in a Book Pack as a part of the Tony Stead Independent Reading Nature Goes Wild Theme Set **Tsunami Man** Anthony D. Fredericks,2002-02-28 Walt Dudley waited on the roof of the Naniloa Hotel overlooking Hilo Bay Eyes glued to the water ears listening for the ring of his cellular phone he was watching for a monster It was a monster speeding across the Pacific Ocean at more than 500 miles per hour It was a monster with the potential for consuming lives and pulverizing buildings It was a monster of enormous strength incredible power and unbelievable destructiveness Tsunamis the stuff of legends in both ancient and modern times are some of the world s most destructive natural disasters But for Dr Walter Dudley tsunamis are not just about devastation and destruction they are about men women and children Dr Dudley s work see *Tsunami* 1998 has expanded our knowledge of these waves and has helped us to better understand and prepare for these unpredictable yet ever present dangers In *Tsunami Man* young readers are given an inside look at the life of a working scientist who uses his knowledge for the common good and serves as an exciting role model for future scientists Filled with dramatic photographs and accounts of tsunami survivors the book also addresses the how and why of tsunamis their impact on human lives and the ways in which information about these killer waves is shared throughout the world Forces of Nature LernerClassroom Editorial Staff,2009-01-01 FORCES OF NATURE TEACHING GUIDE **Slammed by Tsunamis** Caitie McAneney,2017-12-15 Tsunamis are huge waves that move very quickly and cause great destruction Readers will learn how people predict and prepare for tsunamis and how they survive after one of these giant waves hits Diagrams and photographs enhance the text and give students a better understanding of how these natural disasters work and the damage they can cause STEM topics from the Next Generation Science Standards are discussed throughout Readers will love learning about this incredible earth science topic *Deadly Waves* Mary Dodson Wade,2013-01-01 A revised series provides detailed overviews of devastating world disasters weaving together important background information with gripping accounts from survivors and victims **Critical Perspectives on Natural Disasters** Jennifer Viegas,2006-07-15 Presents seventeen articles that were originally published in Scientific American dating from 1998 to 2005 *Tsunami!* Anne Rooney,2015-01-01 Written in British English *Tsunami* describes how earthquakes and volcanoes cause deadly waves the devastation they inflict on communities and the environment and why they are so difficult to predict **Strong in the Rain** Lucy Birmingham,David McNeill,2012-10-30 A riveting account of Japan s triple disaster and an insightful look into what the responses of its people reveal about the national character Blending history science and gripping storytelling *Strong in the Rain* brings the 9 0 magnitude earthquake that struck Japan in 2011 and its immediate aftermath to life through the eyes of the men and women who experienced it Following the narratives of six individuals the book traces the shape of a disaster and the heroics it prompted including that of David Chumreong a Texan with Thai roots trapped in his school s gymnasium with

hundreds of students and teachers as it begins to flood and Taro Watanabe who thought nothing of returning to the Fukushima plant to fight the nuclear disaster despite the effects that he knew would stay with him for the rest of his life This is a beautifully written and moving account from Lucy Birmingham and David McNeill of how the Japanese experienced one of the worst earthquakes in history and endured its horrific consequences **The Dynamics of Disaster** Susan W.

Kieffer,2013-10-21 Natural disasters bedevil our planet and each appears to be a unique event Leading geologist Susan W Kieffer shows how all disasters are connected In 2011 there were fourteen natural calamities that each destroyed over a billion dollars worth of property in the United States alone In 2012 Hurricane Sandy ravaged the East Coast and major earthquakes struck in Italy the Philippines Iran and Afghanistan In the first half of 2013 the awful drumbeat continued a monster supertornado struck Moore Oklahoma a powerful earthquake shook Sichuan China a cyclone ravaged Queensland Australia massive floods inundated Jakarta Indonesia and the largest wildfire ever engulfed a large part of Colorado Despite these events we still behave as if natural disasters are outliers Why else would we continue to build new communities near active volcanoes on tectonically active faults on flood plains and in areas routinely lashed by vicious storms A famous historian once observed that civilization exists by geologic consent subject to change without notice In the pages of this unique book leading geologist Susan W Kieffer provides a primer on most types of natural disasters earthquakes tsunamis volcanoes landslides hurricanes cyclones and tornadoes By taking us behind the scenes of the underlying geology that causes them she shows why natural disasters are more common than we realize and that their impact on us will increase as our growing population crowds us into ever more vulnerable areas Kieffer describes how natural disasters result from changes in state in a geologic system much as when water turns to steam By understanding what causes these changes of state we can begin to understand the dynamics of natural disasters In the book s concluding chapter Kieffer outlines how we might better prepare for and in some cases prevent future disasters She also calls for the creation of an organization something akin to the Centers for Disease Control and Prevention but focused on pending natural disasters **Disaster in the Indian Ocean,**

Tsunami 2004 John Albert Torres,2005 The disaster in the Indian Ocean started with a massive undersea earthquake off the coast of Indonesia What followed was a surge of water called a tsunami that killed thousands of people in nearly a dozen countries Water rose up miles inland and destroyed everything in its path Children were ripped from their parents arms family members were lost to each other forever This is their story But more importantly this is a story of hope of how people woke up to destroyed cities and missing children and did not give up They showed what they were made of by licking their wounds and then trying to find their lives again This is also the story of how the world responded with the biggest humanitarian effort in history Countries from all over the world sent money food water soldiers and doctors This moving account is based on the author s extensive research including his personal trip to Indonesia in January 2005 where he witnessed the devastation firsthand and spoke to dozens of survivors *Disasters* Don Blattner,Lisa Howerton,1999-03

Covers air and space disasters earthquakes fires floods hurricanes tornadoes volcanoes terrorism and more **Natural Disaster Reduction** Dilip Kumar Sinha, 2007 In the aftermath of considerable seismic unrest caused by the tsunami in the Indian Ocean this volume focuses on exposing the coastal vulnerability of the region Despite a plethora of enquiries into natural disasters in different parts of the globe there is now a more conspicuous concern than ever for the South East Asian region This global concern has become all the more prevalent since the Hyogo Declaration in January 2005 and the recent Asian Summit in Indonesia The purpose of this treatise is to bring the characteristics of the disastrous events of the region to the fore seeking to present not only the continuing fatalities and fragilities of the area but also the possibilities for coping with natural disasters The book's layout is specifically shaped by the nature of the damage and threat caused by these disasters particularly concerning the communities at risk and their responses This book will appeal to those involved in both global and local organizations as administrators facilitators stakeholders and activists as well as Governmental Non Governmental agencies societies including organizations such as ESCAP UNDP WMO UNESCO UNCRD *Waves in Geophysical Fluids* John Grue, Karsten Trulsen, 2006-11-06 This book describes the forecasting and risk evaluation of tsunamis by tectonic motion land slides explosions run up and maps the tsunami sources in the world's oceans It presents stochastic Monte Carlo simulations and focusing mechanisms for rogue waves nonlinear wave models breather formulas and the kinematics of the Draupner wave Coverage also reveals the full story about the discovery of the very large oceanic internal waves **Gender Perspective in Disaster Management** Mamata Swain, Jagannath Lenka, Minati Mallick, 2007 Contributed articles presented at the National Level Workshop on Disaster and Gender held during 5-6 January 2007 at P G Dept of Economics North Orissa University sponsored by Ministry of Women and Child Development Government of India *Tsunamis* Horace M. Karling, 2005 The phenomenon called a tsunami *soo* NAHmee is a series of travelling ocean waves of extremely long length generated primarily by earthquakes occurring below or near the ocean floor Underwater volcanic eruptions and landslides can also generate tsunamis In the deep ocean the tsunami waves propagate across the deep ocean with a speed exceeding 800 kilometres per hour km 500 miles per hour and a wave height of only a few tens of centimetres 1 foot or less Tsunami waves are distinguished from ordinary ocean waves by their great length between wave crests often exceeding a 100 km 60 miles or more in the deep ocean and by the time between these crests ranging from 10 minutes to an hour As they reach the shallow waters of the coast the waves slow down and the water can pile up into a wall of destruction tens of meters 30 ft or more in height The effect can be amplified where a bay harbour or lagoon funnels the wave as it moves inland Large tsunamis have been known to rise over 30 meters 100 ft Even a tsunami 3-6 meters m high can be very destructive and cause many deaths and injuries near the ocean During the 1990s over 4 000 people were killed by 10 tsunamis including more than 1000 lives lost in the 1992 Flores region Indonesia and 2200 lives in the 1998 Aitape Papua New Guinea tsunamis Property damage was nearly one billion United States US dollars Although 80 per cent of the tsunamis

occur in the Pacific they can also threaten coastlines of countries in other regions including the Indian Ocean Mediterranean Sea Caribbean region and even the Atlantic Ocean

Natural Hazards and Disaster Management R. B. Singh, Ram Babu Singh, 2006 Disaster management is a multidisciplinary area covering a wide range of issues such as monitoring forecasting evacuation search and rescue relief reconstruction and rehabilitation It also requires multi sectoral governance as scientists planners volunteers and communities all have important roles to play These roles and activities span the pre during and post disaster phases Besides shift of emphasis from disaster response to risk reduction has opened up areas of exploratory research in the subject Vulnerability refers to the susceptibility of a community to a hazard Vulnerability analysis seeks to predict disasters by ensuring timely preparedness on the part of people and institutions and concerned government agencies The emerging arena of disaster mitigation is also becoming an integral aspect of development planning policy formulation and implementation This is where this book comes in It contains 22 chapters in the form of conceptual and empirical case studies from India and other developed countries The blend of theory research and policy makes this book eminently worthwhile for anyone interested in disaster vulnerability and mitigation together with monitoring and forecasting and policy perspectives It would be useful for students researchers and teachers of geography environmental studies disaster management civil engineering and policy science

The Tsunami Book Gill Jolly, 2009 In 2004 the world was stunned when one of the largest earthquakes in fifty years swept a massive wave a tsunami from Indonesia to Thailand India to Africa So what is a Tsunami How are they formed and when and where have they occurred throughout history

Tsunami Crushes Coastline Louise Spilsbury, Richard Spilsbury, 2017-12-15 The Fukushima nuclear power plant was seriously damaged by a tsunami in 2011 Today environmental problems continue showing just how far reaching damage from the massive waves of a tsunami can be Other headline grabbing tsunamis are profiled in this volume providing readers with true life examples as they learn about what causes tsunamis where they are likely to hit and how areas prepare for them throughout the main content Full color photographs of tsunami caused devastation accompany the STEM content boxes of real disaster statistics and quotes from those who lived through a tsunami
