Valuing Health For Regulatory Cost Effectiveness Analysis:

Valuing Health for Regulatory Cost-Effectiveness Analysis Institute of Medicine, Board on Health Care Services, Committee to Evaluate Measures of Health Benefits for Environmental, Health, and Safety Regulation, 2006-04-28 Promoting human health and safety by reducing exposures to risks and harms through regulatory interventions is among the most important responsibilities of the government. Such efforts encompass a wide array of activities in many different contexts: improving air and water quality, safeguarding the food supply, reducing the risk of injury on the job, in transportation and from consumer products, and minimizing exposure to toxic chemicals. Estimating the magnitude of the expected health and longevity benefits and reductions in mortality, morbidity, and injury risks helps policy makers decide whether particular interventions merit the expected costs associated with achieving these benefits and inform their choices among alternative strategies. Valuing Health for Regulatory Cost Effectiveness Analysis provides useful recommendations for how to measure health-related quality of life impacts for diverse public health safety and environmental regulations. Public decision makers, regulatory analysts, scholars, and students in the field will find this an essential review text. It will become a standard reference for all government agencies and those consultants and contractors who support the work of regulatory programs.

An Integrated Framework for Assessing the Value of Community-Based Prevention Institute of Medicine, Board on Population Health and Public Health Practice, Committee on Valuing Community-Based, Non-Clinical Prevention Policies and Wellness Strategies, 2012-12-29 During the past century the major causes of morbidity and mortality in the United States have shifted from those related to communicable diseases to those due to chronic diseases. Just as the major causes of morbidity and mortality have changed so too has the understanding of health and what makes people healthy or ill. Research has documented the importance of the social determinants of health, for example socioeconomic status and education that affect health directly as well as through their impact on other health determinants such as risk factors. Targeting interventions toward the conditions associated with today's challenges to living a healthy life requires an increased emphasis on the factors that affect the current cause of morbidity and mortality factors such as the social determinants of health. Many community-based prevention interventions target such conditions. Community-based prevention interventions offer three distinct strengths. First, because the intervention is implemented population-wide, it is inclusive and not dependent on access to a health care system. Second, by

directing strategies at an entire population an intervention can reach individuals at all levels of risk And finally some lifestyle and behavioral risk factors are shaped by conditions not under an individual s control For example encouraging an individual to eat healthy food when none is accessible undermines the potential for successful behavioral change Community based prevention interventions can be designed to affect environmental and social conditions that are out of the reach of clinical services Four foundations the California Endowment the de Beaumont Foundation the W K Kellogg Foundation and the Robert Wood Johnson Foundation asked the Institute of Medicine to convene an expert committee to develop a framework for assessing the value of community based non clinical prevention policies and wellness strategies especially those targeting the prevention of long term chronic diseases The charge to the committee was to define community based non clinical prevention policy and wellness strategies define the value for community based non clinical prevention policies and wellness strategies and analyze current frameworks used to assess the value of community based non clinical prevention policies and wellness strategies including the methodologies and measures used and the short and long term impacts of such prevention policy and wellness strategies on health care spending and public health An Integrated Framework for Assessing the Value of Community Based Prevention summarizes the committee s findings

The Globalization of Cost-Benefit Analysis in Environmental Policy Michael A. Livermore, Richard L. Revesz, 2013-01-07 The Globalization of Cost Benefit Analysis in Environmental Policy argues in favor of using cost benefit analysis globally and examines the positive impact it can have in developing countries using relevant case studies The book discusses the potential for cost benefit analysis to provoke a global shift toward stronger and more effective economic policies

Environmental Decisions in the Face of Uncertainty Institute of Medicine, Board on Population Health and Public Health Practice, Committee on Decision Making Under Uncertainty, 2013-06-20 The U S Environmental Protection Agency EPA is one of several federal agencies responsible for protecting Americans against significant risks to human health and the environment As part of that mission EPA estimates the nature magnitude and likelihood of risks to human health and the environment identifies the potential regulatory actions that will mitigate those risks and protect public health¹ and the environment and uses that

information to decide on appropriate regulatory action. Uncertainties both qualitative and quantitative in the data and analyses on which these decisions are based enter into the process at each step. As a result, the informed identification and use of the uncertainties inherent in the process is an essential feature of environmental decision making. EPA requested that the Institute of Medicine (IOM) convene a committee to provide guidance to its decision makers and their partners in states and localities on approaches to managing risk in different contexts when uncertainty is present. It also sought guidance on how information on uncertainty should be presented to help risk managers make sound decisions and to increase transparency in its communications with the public about those decisions. Given that its charge is not limited to human health risk assessment and includes broad questions about managing risks and decision making, in this report the committee examines the analysis of uncertainty in those other areas in addition to human health risks.

Environmental Decisions in the Face of Uncertainty explains the statement of task and summarizes the findings of the committee. Environmental Law, Policy, and Economics Nicholas Askounes Ashford, Charles C. Caldart, 2008. The past twenty five years have seen a significant evolution in environmental policy with new environmental legislation and substantive amendments to earlier laws, significant advances in environmental science, and changes in the treatment of science and scientific uncertainty by the courts. This book offers a detailed discussion of the important issues in environmental law, policy, and economics, tracing their development over the past few decades through an examination of environmental law cases and commentaries by leading scholars. The authors focus on pollution, addressing both pollution control and prevention, but also emphasize the evaluation, design, and use of the law to stimulate technical change and industrial transformation, arguing that there is a need to address broader issues of sustainable development. Environmental Law, Policy, and Economics, which grew out of courses taught by the authors at MIT, treats the traditional topics covered in most classes in environmental law and policy, including common law and administrative law concepts and the primary federal legislation. But it goes beyond these to address topics not often found in a single volume: the information-based obligations of industry, enforcement of environmental law, market-based and voluntary alternatives to traditional regulation, risk assessment, environmental economics, and technological innovation and diffusion. Countering arguments found in other texts that government should play a reduced role in environmental protection, this book argues that clear, stringent legal requirements, coupled with flexible means for meeting them and meaningful stakeholder participation, are necessary for bringing about environmental improvements and technological transformations.
