A Complete Guide to Just-in-Time Production: Inside Toyota's Mind Mohammed Hamed Ahmed Soliman, Yes people called Toyota Production System an inventory reduction program when they first heard of it Just in time is one of the main pillars in the TPS Just in time ideally means one piece flow Inventory is the greatest waste in the process and it hides many problems such as quality problems breakdown times waiting waste and more Let s get back to history Prior to the 1970 oil crisis very few people in the world know what Toyota was up to The fact that it emerged stronger than ever while many of its competitors were quite battered made people take notice People went to Japan to find out how Toyota had done this What people found was that Toyota was doing something called just in time In the West this was interpreted as an inventory reduction program As a result it became known as the just in time inventory program Nobody really believed inventory could be taken out of the whole value stream Therefore just in time came to mean go beat the heck out of your suppliers The big three auto companies Ford General Motors and Chrysler had lots of power over their suppliers and they became pretty expert at this tactic to their eventual detriment James P Womack came forward with Lean Thinking in 1996 and helped many to see the whole value chain He showed how waste clogs the system and how continuous improvement was needed to link all parts of the chain to customer demand He explained his findings in plain English but once again people didn t hear Lean might be an element of the larger strategy but it is most likely to be relegated to plant and manufacturing work As a result one company after another has tried lean and failed Many people believe that just in time inventory equals zero inventory The ideal situation is one piece flow which can only be achieved through the use of a manufacturing cell The inventory buffer exists but it is rarely used The Andon system includes a buffer There is a safeguard in place to protect your customer There is a buffer to prevent the entire manufacturing line from being shut down to rectify a problem There is a buffer in place to prevent the breakdown of a vital manufacturing process Just in time production is a manufacturing system that produces and delivers only what is required only when it is required and only in the amount required The Toyota Production System is built on two pillars JIT and jidoka JIT is based on heijunka and consists of three operating elements the pull system takt time and continuous flow

The Ultimate Guide to Successful Lean Transformation Mohammed Hamed Ahmed Soliman,2020-11-30 Many businesses say that lean failed to meet their long term objectives and that the improvements it brought about were only temporary When businesses utilize lean as a toolkit copying and pasting the methodologies without trying to adapt the employee culture manage the improvement process maintain the outcomes and grow their leaders 7 out of every 10 lean projects fail The primary objective when the Toyota production method was developed was to eliminate wastes from the shop floor by utilizing some lean techniques and technologies What wasn t made obvious was that Toyota would need to invest heavily in personnel development and training throughout a protracted leadership development process An issue with management and leadership as well as an incorrect understanding of human behavior and the necessary culture for success is the failure to achieve and sustain improvement
