In Chapter 7 the author takes up a case study of Sony and looks at an example of VIN tools adoption by means of Sony's deliberate strategy using a top down approach. Moreover, learning from Sony's trial error method, the author considers the process of a successful VIN adoption from a bottom up approach through emergent strategies centered on worksite organization. In Chapter 8 the author considers successful case studies of VIN adoption by large companies. The author considers the processes that productively resolve internally generated friction and conflict and transform corporate culture through the use of both top down and bottom up approaches. Finally, in Chapter 9 the book provides new insights derived from the case studies and theoretical and managerial implications related to new knowledge creation by ICT dynamic capability. Bridging theory and practice and providing international scope, this book will be invaluable to academics and students with an interest in business management, ICT, and to managers in high tech industries.

*Making Sustainability Work* Marc J. Epstein, Adriana Rejc Buhovac, 2017-09-08. The ultimate how to do it guide for corporate leaders, strategists, academics, sustainability consultants, and anyone else with an interest in actually making sustainability work for organizations. An updated edition of a landmark book at a time when a growing number of corporate leaders are asking for urgent help in getting this done.

*Value Stream Design* Klaus Erlach, 2012-09-05. Value stream design is increasingly asserting itself as the key approach for production optimization, but there has never been a detailed and systematic presentation of the value stream method before. A gap that has now been filled by this book. The author provides an easily comprehensible code of practice for the effective analysis of production processes, product family oriented factory structuring, and the target oriented development of an ideal future state of production. The book plausibly conveys ten design guidelines for production optimization with corresponding equations, descriptive illustrations, and industrial examples well proven in numerous industrial projects. It addresses the professional public practitioners wishing to avoid waste and systematically improve their factories' value streams, and students tomorrow's practitioners. In contrast to other publications, this book complements the value stream analysis and its unique compact visualization of the entire production process by a detailed illustration of the information flow and a comprehensive discussion of the operator balance chart. The traditional concept of value stream design is significantly expanded with a view to its applicability in complex productions by way of methodological innovation and further development concerning campaign formation, value stream management, and technological process integration. The method is embedded in a comprehensive procedural approach for factory planning, starting with the definition of the desired lean production goals.
