The book helps in the implementation of GoldenGate as a tool for moving data in all types of use cases from a simple database copy to high performance replication in real time within an active active scenario. The book takes a hands on example based approach with an emphasis on the advanced implementation components that make up so much of the power and capability that GoldenGate offers. A GoldenGate implementation generally consists of a group project involving both business and technical resources. First a business case must be built showing a proper justification and return on investment. Then comes a planning phase and that's followed by implementation and actual use of the tool. Beginning Oracle GoldenGate begins from the beginning by helping you make the business case. Next the book guides you through the subsequent installation, configuration and operation of the product. Beginning Oracle GoldenGate helps you learn to replicate using classic capture and integrated capture. You'll learn about one way and multi master replication. Along the way you'll learn about the GoldenGate Manager and about the Extract and Pump processes and when to use them. You'll learn some critical points about the oft overlooked task of creating the target database for a replication process. You'll learn about basic maintenance, security and types of storage. Coverage is also given to metrics reporting and troubleshooting. Takes you through justification, installation and support. Provides multiple perspectives on each implementation approach. Starts with basic and discusses more advanced implementations. What you'll learn: Implement classic capture in a one way setup. Build integrated capture and replication scenarios. Design, architect and implement a multi master replication model. Perform heterogeneous replication between multiple database architectures. Replicate unsupported data types using tokens. Manage and troubleshoot multiple GoldenGate implementations. Who this book is for: Beginning Oracle GoldenGate is aimed at technical architects, database administrators and others who are tasked with implementing data movement across large enterprises. Data and its flow are like blood moving through the veins of the enterprise.
