Schwarzmann,2022-05-31 Providing a shared memory abstraction in distributed systems is a powerful tool that can simplify the design and implementation of software systems for networked platforms This enables the system designers to work with abstract readable and writable objects without the need to deal with the complexity and dynamism of the underlying platform The key property of shared memory implementations is the consistency guarantee that it provides under concurrent access to the shared objects The most intuitive memory consistency model is atomicity because of its equivalence with a memory system where accesses occur serially one at a time Emulations of shared atomic memory in distributed systems is an active area of research and development The problem proves to be challenging and especially so in distributed message passing settings with unreliable components as is often the case in networked systems We present several approaches to implementing shared memory services with the help of replication on top of message passing distributed platforms subject to a variety of perturbations in the computing medium Performance Evaluation Methodologies and Tools Qianchuan Zhao,Li Xia,2021-12-07 This book constitutes the refereed conference proceedings of the 14th International Conference on Performance Evaluation Methodologies and Tools VALUETOOLS 2021 held in October 2021 Due to the safety concerns and travel restrictions caused by COVID 19 VALUETOOLS took place online in a live stream VALUETOOLS 2021 aims to provide a world leading and multidisciplinary venue for researchers and practitioners in diverse disciplines such as computer science networks and telecommunications operations research optimization control theory and manufacturing The 16 full papers were carefully reviewed and selected from 32 submissions and focus on methodologies and practices in modelling
