

Track/Rear Suspension

This Track/Rear Suspension section has been organized so each procedure can be completed individually and efficiently. Each sub-section has its necessary: Removing, Disassembling, Cleaning and Inspecting, Assembling, and Installing procedures.

■NOTE: Some photographs used in this section are used for clarity purposes only and are not designed to depict actual conditions.

Removing Skid Frame

■NOTE: Many service procedures can be performed without removing the skid frame. Closely observe the note introducing each sub-section for this important information.

1. Rotate the machine around adjuster back counter-clockwise to release pressure on the skid frame from shock absorber.

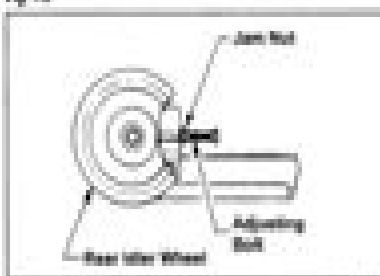

2. Disconnect the quick-coupler for the front arm adjuster located under the driven pulley; then raise the front end of track and rest of the leading tractor on the inside of the track.

CAUTION

If this is not done, damage to hose may result.

3. Loosen the jam nuts and two track-tension adjusting bolts.

Fig. 15

4. Tip skid-frame onto the right side on a piece of cardboard or carpet to prevent ground scratching.

CAUTION

Use the oil and bumper to tip the skid-frame to avoid damage. Also, take care that no oil or gasoline leaks out.

5. Using the Rear Suspension Spring Tool (p/n 0044-001), remove the shock leg of the rear spring from the adjusting cam.

Fig. 16

CAUTION

Care must be taken when removing the spring from the adjusting cam or damage or injury could result.

6. Remove left-side cap screws securing the front and rear arms to track. Account for and note the position of one thick flat washer on the inside of the front arm.

7. Tip skid-frame onto the left side and remove right-side spring and cap screws; then remove the skid frame.

■NOTE: Take care not to damage adjuster hose while removing the skid frame.

Wear Strips

REMOVING

■NOTE: It is possible to remove and install a wear strip without removing the skid frame. To do this, remove the machine drive and lock nut securing the wear strip at the front of the slide rail; then align the wear strip with openings (windows) in the track and drive it rearward off the slide rail. Apply low-temperature grease to the new wear strip and slide rail; then align the wear strip with openings (windows) in the track and drive it forward onto the slide rail. Secure with the machine screw and lock nut.

■NOTE: The skid frame should be removed for this procedure (see Removing Skid Frame in this section).

1. Remove the machine screw and lock nut securing the wear strip to the front of the slide rail.

Fig. 17

2. Using a pipe wrench and starting from either end, bend the edge of the wear strip with the pipe wrench (see Fig. 18) and twist the wear strip off the slide rail. Move the pipe wrench 7.5 cm (3 in.) and again twist the wear strip off the rail. Repeat this procedure until the wear strip is free of the rail.

Fig. 18

■NOTE: The wear strip can also be driven off the slide rail; however, it is quicker to use a pipe wrench.
