Zemax Manual 2015:

A Practical Guide to Handling Laser Diode Beams Haiyin Sun, 2015-02-20 This book offers the reader a practical guide to the control and characterization of laser diode beams. Laser diodes are the most widely used lasers accounting for 50% of the global laser market. Correct handling of laser diode beams is the key to the successful use of laser diodes and this requires an in depth understanding of their unique properties. Following a short introduction to the working principles of laser diodes the book describes the basics of laser diode beams and beam propagation including Zemax modeling of a Gaussian beam propagating through a lens. The core of the book is concerned with laser diode beam manipulations: collimating and focusing, circularization and astigmatism correction, coupling into a single mode optical fiber, diffractive optics and beam shaping and manipulation of multi transverse mode beams. The final chapter of the book covers beam characterization methods describing the measurement of spatial and spectral properties including wavelength and linewidth measurement techniques. The book is a significantly revised and expanded version of the title *Laser Diode Beam Basics: Manipulations and Characterizations* by the same author. New topics introduced in this volume include laser diode types and working principles, non paraxial Gaussian beam, Zemax modeling, numerical analysis of a laser diode beam, spectral property characterization methods and power and energy characterization techniques. The book approaches the subject in a practical way with mathematical content kept to the minimum level required making the book a convenient reference for laser diode users.

CAD-Based Optical Design with Quadoo Rafael G. González-Acuña, 2025-03-13 In *CAD Based Optical Design with Quadoo* we explore how optical design entails evaluating application requirements and creating optical systems specifically engineered to meet the exact needs of optical instruments. This extensive system may include optics, light sources, sensors, electronic boards, display devices and other components. Primarily optical design focuses on determining the shapes, positions and materials of lenses and mirrors to ensure the optical system adheres to indicated criteria and specifications. To meet specific requirements, lens designers must use optical design software as an aid for their challenging task. Most of the mentioned optical design programs are based on the idea of a spreadsheet that contains the information on each surface: radius, thickness, materials and position among other parameters. This paradigm has its positive aspects and negative aspects. But optical design is a field under constant evolution and new ways to design optical systems are emerging. In this book we are going to construct, optimize and analyze optical systems under the fresh paradigm of Computer aided design (CAD) with the help of Quadoo Optical CAD, a novel optical design software. Within the chapters of the book we are going to see why this paradigm can be very useful in designing optical systems in comparison with the one proposed by spreadsheets. The purpose of this book is to teach optical design with a fresh and reliable tool, Quadoo Optical CAD. This book mixes the classical books in optical design and a manual of Quadoo Optical CAD. The purpose of this blend is to give readers enough knowledge to start a practical optical design with solid theory and robust tools in Quadoo Optical CAD.
