LAB 3-B: ALPINE AND CONTINENTAL GLACIERS

OBJECTIVE 1: Define the major types of glaciers and alpine glaciers and continental glaciers. A *glacier* is a mass of ice that flows under its own weight. In alpine glaciers, the source of the ice is within the glacier itself, and the ice flows down the mountain slope. In continental glaciers, the ice is derived from a large accumulation of snow and ice that has built up over time. Continental glaciers are found in Antarctica and Greenland.

OBJECTIVE 2: Identify the characteristic features of alpine glaciers and continental glaciers. Alpine glaciers are found in mountainous regions and are characterized by their steep slopes and their ability to flow in any direction. Continental glaciers are found in low-lying areas and are characterized by their flat surfaces and their ability to flow in a single direction.
