Zpl Programming Language Manual:

A Programmer's Guide to ZPL Lawrence Snyder, 1999 ZPL is a new array programming language for science and engineering computation Designed for fast execution on both sequential and parallel computers it is intended to replace languages such as Fortran and C This guide provides a complete introduction to ZPL It assumes that the reader is experienced with an imperative language such as C Fortran or Pascal Though precise and thorough it does not attempt to be a complete reference manual but rather it illustrates typical ZPL usage and explains in an intuitive manner how the constructs work The emphasis is on teaching the reader to be a ZPL programmer Scientific computations are used as examples throughout and a list of common features is printed on the inside back cover for easy reference SIMD Programming Manual for Linux and Windows Paul Cockshott, Kenneth Renfrew, 2013-03-09 A number of widely used contemporary processors have instruction set extensions for improved performance in multi media applications The aim is to allow operations to proceed on multiple pixels each clock cycle Such instruction sets have been incorporated both in specialist DSPchips such as the Texas C62xx Texas Instruments 1998 and in general purpose CPU chips like the Intel IA32 Intel 2000 or the AMD K6 Advanced Micro Devices 1999 These instruction set extensions are typically based on the Single Instruction stream Multiple Data stream SIMD model in which a single instruction causes the same mathematical operation to be carried out on several operands or pairs of operands at the same time The level of parallelism supported ranges from two floating point operations at a time on the AMD K6 architecture to 16 byte operations at a time on the Intel P4 architecture Whereas processor architectures are moving towards greater levels of parallelism the most widely used programming languages such as C Java and Delphi are structured around a model of computation in which operations take place on a single value at a time This was appropriate when processors worked this way but has become an impediment to programmers seeking to make use of the performance offered by multi media instruction sets The introduction of SIMD instruction sets Peleg et al **Implementation of Functional Languages** Thomas Arts, Markus Mohnen, 2003-08-01 This book constitutes the thoroughly refereed post proceedings of the 13th International Workshop on the Implementation of Functional Languages IFL 2001 held in Stockholm Sweden in September 2001 The eleven revised full papers presented have gone through a thorough round of post workshop reviewing and were selected from 28 workshop papers Among the topics covered are relevant aspects of implementing and using functional languages such as type systems compilation program optimization theorem proving program correctness program analysis parallel compilers subtyping and generic programming *Implementation of Functional Languages* Kevin Hammond, Tony Davie, Chris Clack, 2003-07-31 This book constitutes the thoroughly refereed post workshop proceedings of the 10th International Workshop on the Implementation of Functional Languages IFL 98 held in London UK in September 1998 The 15 revised full papers presented were carefully selected during two rounds of reviewing The volume covers a wide range of topics including parallel process organization parallel profiling
