argues that today's technological market is dominated by two contrasting business models: the generative and the non-generative. The generative models, like PCs, Windows, and Macs, allow third parties to build upon and share through them. The non-generative model is more restricted; appliances such as the Xbox, iPod, and TomTom might work well, but the only entity that can change the way they operate is the vendor. If we want the Internet to survive, we need to change. People must wake up to the risk or we could lose everything.
