National Library of Medicine Current Catalog National Library of Medicine (U.S.),1971 First multi year cumulation covers six years 1965 70 **Current Catalog** National Library of Medicine (U.S.),1969 Includes subject section name section and 1968 1970 technical reports **Frontiers in Crustacean Neurobiology** K. Wiese,2013-11-21 Donald Kennedy President Stanjord University Alnwst exactly a dozen years elapsed between the time I set aside I thought temporarily J my own interest in crustacean nervous systems and the arrival of an invitation from Konrad Wiese to participate in this symposium The intervening years have plainly been productive ones for the field indeed I can only hope that there is no causal connection between its prosperity and my absence Discontinuous contact with an intellectual venture whatever disappointments it may present does oifer one virtue it provides a nwre dramatic alnwst stroboscopic view of progress To the lapsed practitioner the rate of advance in crustacean neurobiology over the decade seems remarkable equally remarkable is the number of able young researchers many of them the scientific progeny of my colleagues from the sixties and seventies How to summarize the changes they have wrought Those of us who began working with crustacean nervous systems thirty years 090 or so were attracted by several features First of alt there was a limited nwtor system with readily identifiable neurons It was dijft cult to look at those old methylene blue stains of Retzius and not want to do an experiment immediately Kees Wiersma ojten did and it was he who nwst persuasively called our attention to the advantages oifered by neuronal parsinwny in combination with stereotyped motor output patterning Ted Bullock exploited these features in his elegant early experiments on cardiac ganglia **Neuroethology** J.-P. Ewert,2012-12-06 Historically the search for the neural bases of behavior goes back a long way Neuroethology which is concerned with the experimental analysis ofthe releasing and control mech anisms of behavior is a young discipline Results from this multidisciplinary branch of research which uses physical chemical and mathematical methods have not yet been extensively treated in textbooks of neurophysiology and ethology This book is intended as a first attempt to pose major questions of neuroethology and to demonstrate by means of selected research examples some of the ways by which these questions are being approached Inevitably this cannot be a complete and in depth detailed treatment of all of the neurobiology examples and I realize that such a selection is of a subjective nature The overall goal ofthe book is to present an introduction After outlining some of the very basic neurophysiological and ethological concepts Chaps 2 and 3 neuroethological questions and methods are demonstrated extensively by means of a particular example Chap 4 There are two reasons to choose the visually guided prey catching and avoidance behavior of the Common Toad 1 it is a system which I have inves tigated for about fifteen years and therefore know best 2 the toad story is one of the most comprehensive neuro ethological approaches so far Thus it is possible here to outline the major concepts of neuroethology and to pose the basic questions **The Neurosciences: Paths of Discovery, I** F. WORDEN,J. SWAZEY,G. ADELMAN,2012-12-06 To commemorate properly the 70th birthday of a man who by his very nature is too busy to pause for

any kind of ceremonial event unless it has a concomitant functional output was a difficult problem for the Staff and Associates of the Neurosciences Research Program. Frank F. O'S has always dreaded the prospect that sometime it might be appropriate for his colleagues to present him a Fest schrift. In fact Fest me no Schriften became his battle cry expressing his feeling that the idea of testimonials clustered into a book was anathema. So the breakthrough idea for the planners was to organize a symposium around the theme of discovery in neuroscience that would be valuable scientifically and in its demonstration of interdisciplinary interaction would support that emphasis in Frank's career. After much planning a program was developed beginning with a birthday party the evening before followed by the two day symposium and closing with the first F O Schmitt Lecture in Neuroscience. We hope that publication of the scientific proceedings in this volume will be of interest not only to the neuroscience community but also to a broad general readership interested in discovery, understanding and the creative processes in scientific work. An organizing committee chaired by Fred Worden collected advice and guidance leading to the selection of speakers whose scientific careers have played an important part in the recent history of modern neuroscience.

Handbook of Evolution Franz M. Wuketits, Christoph Antweiler, 2008-11-20. This two volume handbook is unique in spanning the entire field of evolution from the origins of life up to the formation of social structures and science and technology. The author team of world renowned experts considers the subject from a variety of disciplines with continuous cross referencing so as to retain a logical internal structure. The uniformly structured contributions discuss not merely the general knowledge behind the evolution of life but also the corresponding development of language, society, economies, morality and politics. The result is an overview of the history and methods used in the study of evolution including controversial theories and discussions. A must for researchers in the natural sciences, sociology and philosophy as well as for those interested in an interdisciplinary view of the status of evolution today.

New Aspects of Human Ethology Klaus Atzwanger, Karl Grammer, Katrin Schäfer, Alain Schmitt, 2007-11-23. Rough and tumble play provided one of the paradigmatic examples of the application of ethological methods back in the 1970's. Since then a modest number of researchers have developed our knowledge of this kind of activity using a variety of methods and addressing some quite fundamental questions about age changes, sex differences, nature and function of behaviour. In this chapter I will review work on this topic mentioning particularly the interest in comparing results from different informants and different methods of investigation. Briefly, rough and tumble play or R and whose general characteristic is that the behaviours seem to be agonistic but in a non serious playful context. The varieties of R but this research had a strong practical orientation and lacked the cross species perspective and evolutionary orientation present in Groos' work.
