

Sed Command in Linux/Unix with examples

SED command in UNIX stands for stream editor and it can perform lots of functions on file like searching, find and replace, insertion or deletion. Though most common use of SED command in UNIX is for substitution or for find and replace. By using SED you can edit files even without opening them, which is much quicker way to find and replace something in file, than first opening that file in VI Editor and then changing it.

- SED is a powerful text stream editor. Can do insertion, deletion, search and replace(substitution).
- SED command in unix supports regular expression which allows it perform complex pattern matching.

Note that `sed` does not affect the source file unless instructed. Instead, the command displays the changes made by the given command in its output.

To overwrite the original file, use **the** `-i` option to save the modifications. However, such practice is not recommended before testing out the command output.

Replacing or substituting string :

Sed 's/search_String/replace_String/' file_name

Example: `sed 's/hello/world/' file_name.txt`

Replacing the nth occurrence of a pattern in a line :

`sed 's/hello/world/2' geekfile.txt`

Replacing all the occurrence of the pattern in a line :

`sed 's/hello/world/g' geekfile.txt`
