Gaston,2010 This is the urban century in which for the first time the majority of people live in towns and cities Understanding how people influence and are

influenced by the green component of these environments is therefore of enormous significance Providing an overview of the essentials of urban ecology the book begins by covering the vital background concepts of the urbanisation process and the effect that it can have on ecosystem functions and services Later sections are devoted to examining how species respond to urbanisation the many facets of human ecology interactions and the issues surrounding urban planning and the provision of urban green spaces Drawing on examples from urban settlements around the world it highlights the progress to date in this burgeoning field as well as the challenges that lie ahead Provided by publisher Urban Ecology Jari Niemelä, Jürgen H. Breuste, Glenn Guntenspergen, Nancy E. McIntyre, Thomas Elmqvist, Philip James, 2011-11-17 Urbanization is a global phenomenon that is increasingly challenging human society It is therefore crucially important to ensure that the relentless expansion of cities and towns proceeds sustainably Urban ecology the interdisciplinary study of ecological patterns and processes in towns and cities is a rapidly developing field that can provide a scientific basis for the informed decision making and planning needed to create both viable and sustainable cities Urban Ecology brings together an international team of leading scientists to discuss our current understanding of all aspects of urban environments from the biology of the organisms that inhabit them to the diversity of ecosystem services and human social issues encountered within urban landscapes The book is divided into five sections with the first describing the physical urban environment Subsequent sections examine ecological patterns and processes within the urban setting followed by the integration of ecology with social issues The book concludes with a discussion of the applications of urban ecology to land use planning The emphasis throughout is on what we actually know as well as what we should know about the complexities of social ecological systems in urban areas in order to develop urban ecology as a rigorous scientific discipline **Sustainable Drainage Systems** Miklas Scholz, 2018-10-04 This book is a printed edition of the Special Issue Sustainable Drainage Systems that was published in *Water* *Runoff Prediction in Ungauged Basins* Günter Blöschl, Murugesu Sivapalan, Thorsten Wagener, Alberto Viglione, Hubert Savenije, 2013-04-18 Predicting water runoff in ungauged water catchment areas is vital to practical applications such as the design of drainage infrastructure and flooding defences runoff forecasting and for catchment management tasks such as water allocation and climate impact analysis This full colour book offers an impressive synthesis of decades of international research forming a holistic approach to catchment hydrology and providing a one stop resource for hydrologists in both developed and developing countries Topics include data for runoff regionalisation the prediction of runoff hydrographs flow duration curves flow paths and residence times annual and seasonal runoff and floods Illustrated with many case studies and including a final chapter on recommendations for researchers and practitioners this book is written by expert authors involved in the prestigious IAHS PUB initiative It is a key resource for academic researchers and professionals in the fields of hydrology hydrogeology ecology geography soil science and environmental and civil engineering **Wadi Flash Floods** Tetsuya Sumi, Sameh A. Kantoush, Mohamed Saber, 2021-10-11 This open access book brings

together research studies developments and application related flash flood topics on wadi systems in arid regions The major merit of this comprehensive book is its focus on research and technical papers as well as case study applications in different regions worldwide that cover many topics and answer several scientific questions The book chapters comprehensively and significantly highlight different scientific research disciplines related to wadi flash floods including climatology hydrological models new monitoring techniques remote sensing techniques field investigations international collaboration projects risk assessment and mitigation sedimentation and sediment transport and groundwater quality and quantity assessment and management In this book the contributing authors engineers researchers and professionals introduce their recent scientific findings to develop suitable applicable and innovative tools for forecasting mitigation and water management as well as society development under seven main research themes as follows Part 1 Wadi Flash Flood Challenges and Strategies Part 2 Hydrometeorology and Climate Changes Part 3 Rainfall Runoff Modeling and Approaches Part 4 Disaster Risk Reduction and Mitigation Part 5 Reservoir Sedimentation and Sediment Yield Part 6 Groundwater Management Part 7 Application and Case Studies The book includes selected high quality papers from five series of the International Symposium on Flash Floods in Wadi Systems ISFF that were held in 2015 2016 2017 2018 and 2020 in Japan Egypt Oman Morocco and Japan respectively These collections of chapters could provide valuable guidance and scientific content not only for academics researchers and students but also for decision makers in the MENA region and worldwide
