Uploady Trust:

Trust Iyanla Vanzant, 2015-12-08 Learning to trust is one of life's most difficult lessons. That's because trust is not a verb; it's a noun. But what if the real problem is not that we can't trust other people; it's that we can't trust ourselves. In this compelling volume filled with illuminating and heartrendingly powerful stories of broken trust, betrayal, and triumph, Iyanla demonstrates why the four essential trusts—Trust in Self, Trust in God, Trust in Others, and Trust in Life—are like oxygen: without them, none of us can survive. Mastering these four essential trusts requires both a process and a practice. Life gives you the process through your experiences; people provide you the opportunity to practice. Iyanla explores what trust really is and reveals why some of the most shocking trust violations offer us profound opportunities for personal growth and healing. Her pragmatic trust prescriptions, rooted in self-awareness, intuition, communication, and spiritual practice, will challenge you to face your deepest fears and free you to cultivate new levels of increased authenticity, greater resilience, renewed peace, and joy.

Trust in Social Media Jiliang Tang, Huan Liu, 2022-06-01 Social media greatly enables people to participate in online activities and shatters the barrier for online users to create and share information at any place at any time. However, the explosion of user-generated content poses novel challenges for online users to find relevant information or, in other words, exacerbates the information overload problem. On the other hand, the quality of user-generated content can vary dramatically from excellence to abuse or spam, resulting in a problem of information credibility. The study and understanding of trust can lead to an effective approach to addressing both information overload and credibility problems. Trust refers to a relationship between a trustor (the subject that trusts a target entity) and a trustee (the entity that is trusted). In the context of social media, trust provides evidence about with whom we can trust to share information and from whom we can accept information without additional verification. With trust, we make the mental shortcut by directly seeking information from trustees or trusted entities, which serves a two-fold purpose: without being overwhelmed by excessive information, i.e., mitigated information overload, and with credible information due to the trust placed on the information provider, i.e., increased information credibility. Therefore, trust is crucial in helping social media users collect relevant and reliable information, and trust in social media is a research topic of increasing importance and of practical significance. This book takes a computational perspective to offer an overview of characteristics and elements of trust and illuminate a wide range of computational tasks of trust. It introduces basic concepts, deliberates challenges and opportunities, reviews state-of-the-art algorithms, and elaborates effective evaluation methods in the trust study. In particular, we illustrate properties and representation models of trust, elucidate trust prediction with representative algorithms, and demonstrate real-world applications where trust is explicitly used. As a new dimension of the trust study, we discuss the concept of distrust and its roles in trust computing.
