The Urbanism of Exception Martin J. Murray, 2017-03-10 This book argues that understanding global urbanism in the twenty first century requires us to cast our gaze upon vast city regions without an urban core **Public Urban Space, Gender and Segregation** Reza Arjmand, 2016-09-13 Public spaces are the renditions of the power symmetry within the social setting it resides in and is both controlling and confining of power In an ideologically laden context urban design encompasses values and meanings and is utilized as a means to construct the identity and perpetuate visible and invisible boundaries Hence gendered spatial dichotomy based on a biological division of sexes is often employed systematically to evade the transgression of women into the public spaces The production of modern urban space in the Middle East is formed in the interplay between modernity tradition and religion Examining women in public spaces and patterns of interaction with gender segregated and mixed space this book argues that gendered spaces are far from a static physical spatial division and produce a complex and dynamic dichotomy of men public and women private Taking the example of Iran normative and ideologically laden gender segregated public spaces have been used as a tool for the Islamization of everyday life The most recent government effort includes women only parks purportedly designed and administered through women s contributions as well as to accommodate their needs and provide space for social interaction and activities Combining research approaches from urban planning and social sciences this book analyses both technical and social aspects of women only parks Addressing the relationships between ideology urban planning and gender the book interprets power relations and how they are used to define and plan public and semi public urban spaces Lack of communication across disciplinary boundaries as result of complexities of urban life has been one of the major hindrances in studying urban spaces in the Middle East Addressing the concern the cross disciplinary approach employed in this volume is an amalgamation of methods informed by urban planning and social sciences which includes an in depth analysis of the morphological perceptual social visual functional and temporal dimensions of the public space the women only parks in Iran Based on critical ethnography this volume uses a phenomenological approach to understating women in gendered spaces Interaction of women in women only parks in Iran a gendered space which is growing in popularity across the Muslim world is discussed thoroughly and compared vis vis gender neutral public spaces The book targets scholars and students within a wide range of academic disciplines including urban

Urban microclimates cannot be explained solely on the basis of scientific phenomena but are also affected materially and spatially by the city's local architecture. The layout design and facade construction of buildings have a major impact on wind and temperature conditions. For this reason, architecture and urban design that have an effect on microclimates must be investigated in their social and cultural contexts. The publication uses international case studies to explain these relationships. The focus is on manifestations of urban microclimates in an architectural and urban design context. The places investigated are located in France, Italy, the USA, New Zealand, the Philippines, Taiwan, and Burkina Faso.

Evolving Public Space in South Africa Karina Landman, 2018-11-09. Evolving Public Space in South Africa discusses the transformation of public space highlighted in the country. Drawing on examples from major cities, the author demonstrates that these spaces are not only becoming wasted space but are also adapting and evolving to accommodate new users and uses in various parts of the city. This process of evolution tends to challenge the more traditional visions and general global views of declining public space in cities and argues that it rather resembles the resilience of these spaces and the potential for regeneration through continuously emerging and mutating forms, functions, and meanings. Including over 20 black and white images, this book would be beneficial to academics and students of urban planning and design and those interested in the regeneration of cities.

Urban Resilience Yoshiki Yamagata, Hiroshi Maruyama, 2016-08-10. This book is on urban resilience: how to design and operate cities that can withstand major threats such as natural disasters and economic downturns and how to recover from them. It is a collection of latest research results from two separate but collaborating research groups: namely, researchers in urban design and those on general resilience theory. The book systematically deals with the core aspects of urban resilience: systems, management, issues, and populations. The taxonomy can be broken down into threats, systems, resilience, cycles, and recovery types in the context of urban resilience. It starts with a discussion of systems resilience models focusing on the central idea that resilience is a moving average of costs: a set of trajectories in a two-player game paradigm. The second section explores management issues, including planning, operating, and emergency response in cities with specific examples such as land use planning and carbon neutral scenarios for urban planning. The next section focuses on urban dwellers and specific people-related issues in the context of resilience. Agent-based simulation of behaviour and perception-based resilience, as well as brand crisis management, are representative examples of the topics discussed. A further section examines systems like public utilities, including managing power supplies, cyber security issues, and models for pandemics. It concludes with a discussion of the future challenges and risks facing complex systems, for example in resilient power grids, making it essential reading for a wide range of researchers and policymakers.
