Urban Environmental Management and Technology Keisuke Hanaki, 2008-04-17 This book examines the importance of urban environmental management in the face of formidable challenges It offers a comprehensive overview of science and policy with discussion of relevant traditional and contemporary technologies

Innovations in Collaborative Urban Regeneration Masahide Horita, Shinichi Koizumi, 2009-07-11 In creating urban space there is always an exchange of dialogue as to what the space currently is and how it ought to exist by those who live in that place those who have a stake in its future and those who sense the need for improvement in its harsh reality Some of their thoughts materialize in the form of a physical change to the current environment and urban regeneration is one such form This process in which people redefine their living environment and socially reconstruct the meaning and value of a place is all too important in deciding what if any change should be introduced in the form of a physical project Some might argue that this communicative process is indeed the very core or even the definition of urban regeneration rather than a mere condition for instigation However it has also been observed that such a communicative process is often difficult to manage if it happens at all Social exclusion power imbalance conflict indifference and lack of communicative social capital are the usual suspects in collective inaction but it is also true that they are familiar constituents of any urban life In some social contexts little attention has been paid to such complexity

Managing Urban River Ecosystems for Achieving Regional Sustainability in the Pearl River Delta Region Hui Liu, 2024-12-13 This book provides a systematic understanding of urban river management from the perspective of ecosystem health in the Pearl River Delta region of China where rapid socio economic development happens together with exploitation and pollution of the natural environment Urban rivers which used to support navigation and provide water resources to humans now suffer from various kinds of ecosystem degradation and thus create threats to regional sustainability This book treats the urban river as an ecosystem which closely relates to and interacts with humans and defines urban river ecosystem health as a requirement at three levels sensorial fitness living water and affinity with humans which emphasizes more on the human oriented needs The evolution processes of urban river ecosystem health protection can generally be divided into four phases demonstrating the relationships between human activities and UREH status as simple balance uncontrolled imbalance continuous interlocking and stable harmony The relationships between typical urban rivers and humans in the Pearl River Delta region China are then analyzed on both regional and local scales and from lateral time longitudinal and spatial dimensions Intensive human activities together with the intrinsic complex and high density river network result in deteriorating water quality changing hydrological conditions and damaging the river ecosystem in this region From the perspective of political ecology

various actors in urban river management include governmental agencies business multilateral institutions ENGOs and grassroots actors whose unequal power relations vary over time and space causing conflicts as well as coordination Especially different governmental agencies are engaged resulting into overlap and gap among their functions as well as spatial discrepancy River Chief System as a new practice of urban river management has strengthened the collaboration effect and got success in river pollution control The spatial scale effect of human activities on urban river water quality is examined implying the necessity of adopting a unified management strategy at the buffer zone scale to protect and restore urban river ecosystem health The target audience of this book includes postgraduate students and researchers who have research interests in as well as government officers whose routine is related to water management

Stock Management for Sustainable Urban Regeneration Yozo Fujino, Takafumi Noguchi, 2008-12-24 While the development of material civilization and industrialization initiated by the Industrial Revolution in the eighteenth century made possible a more comfortable life for mankind it caused a concentration of human resources and led to rapid urbanization around the world Consequently a multitude of environmental problems such as global warming disruption of the ecosystem depletion of natural resources and the accumulation of waste have become international issues Urbanization accelerated the construction of super high rise buildings huge complex facilities and stacked up networks of roads and railways At the same time however it resulted in crowded city blocks that were fragile and vulnerable to natural disasters such as earthquakes tsunamis and floods and in historical structures becoming ruined and cultural urban space exhausted Maintenance and repair of the amassed stock of structures are causing an economic burden today Against this background the Urban Stock Management Research Group in the Center for Sustainable Urban Regeneration cSUR at the University of Tokyo has conducted research to develop integrated methods to maintain existing urban assets and to conserve the cultural social context of urban environments Urban stock management such as conservation utilization and renovation is vital for simultaneously supporting urban history culture changing lifestyles and other conflicting elements Therefore new engineering for renovation and utilization of urban stock is urgently required to maintain safety the environment and continuing comfort as well as to save natural resources and reduce wastes

Spatial Data Infrastructure for Urban Regeneration Y. Sadahiro, 2008-08-22 This book represents part of the result of a project undertaken by the Center for Sustainable Urban Regeneration cSUR The center was established in 2003 by a research fund titled the 21st Century Center of Excellence COE Program provided by the Ministry of Education Culture Sports Science and Technology of Japan The project leader was Shichiro Ohgaki a professor in the Department of Urban Engineering of the University of Tokyo cSUR integrates the four specific fields of urban planning architecture civil engineering and environmental engineering with the participation of over a hundred researchers of the university The objective of the center is to create an integrated approach to and knowledge for sustainable urban regeneration based on a global network of researchers and professionals and to coordinate an international research alliance that consists of leading

academic institutions worldwide The project was carried out by four research units A Environment Management B Urban Stock Management C Social Information Management D Action Studies Each unit consisted of smaller subunits The third unit which includes the contributors to this book consisted of three smaller groups C 1 The Next Generation Geographic Information System Integrating Human and Social Information C 2 Decoding and Analysis of Historical and Cultural Information Concerning Urban Space C 3 Participatory Planning and Urban Space Management Support Systems

Megacities Andre Sorensen,Junichiro Okata,2010-11-18 For the first time in human history more than half the world s population is urban A fundamental aspect of this transformation has been the emergence of giant cities or megacities that present major new challenges This book examines how issues of megacity development urban form sustainability and unsustainability are conceived how governance processes are influenced by these ideas and how these processes have in turn influenced outcomes on the ground in some cases in transformative ways Through 15 in depth case studies by prominent researchers from around the world this book examines the major challenges facing megacities today The studies are organized around a shared set of concerns and questions about issues of sustainability land development urban governance and urban form Some of the main questions addressed are What are the most pressing issues of sustainability and urban form in each megacity How are major issues of sustainability understood and framed by policymakers Is urban form considered a significant component of sustainability issues in public debates and public policy Who are the key actors framing urban sustainability challenges and shaping urban change How is unsustainability risk or disaster imagined and how are those concerns reflected in policy approaches What has been achieved so far and what challenges remain The publication of this book is a step toward answering these and other crucial questions **Advanced Monitoring and Numerical**

Analysis of Coastal Water and Urban Air Environment Hiroaki Furumai,Shinji Sato,Motoyasu Kamata,Kazuo Yamamoto,2010-02-16 Various environmental issues are related to urban activities Through the growing recognition of the necessity to develop sustainable urban management the University of Tokyo established the Center for Sustainable Urban Regeneration cSUR in July 2003 A research program at the cSUR was designed to create an integrated approach and to provide knowledge for sustainable urban regeneration with the aid of a global network of researchers and professionals and to coordinate the international research alliance made up of leading academic institutions worldwide As part of the program several studies have been conducted focusing on urban environmental problems in Asian megacities such as Tokyo Taipei Guangzhou Shenzhen and Bangkok The following topics in particular were selected for integrated and strategic research supported by researchers from the fields of architecture civil engineering and environmental engineering Integrated analysis of the urban atmospheric environment and its relationship with control of indoor air conditions in East and Southeast Asian countries Dynamic behavior of urban non point pollutants in coastal environments The research contains interesting intensive field monitoring data on the coastal environment and the urban air environment Topics also include state of the art

environmental monitoring and simulation analysis in urban areas Key aspects of the research in advanced monitoring and the application of environmental numerical simulation were selected for inclusion in this book Integrating the monitoring and modeling of urban environments is essential for engineers to identify and investigate environmental problems and their solutions

Groundwater Management in Asian Cities Satoshi Takizawa, 2008-08-27 In 2007 the world's urban population surpassed the number of people living in rural areas and is still growing The number of city dwellers who do not have access to piped water and rely on groundwater is also increasing In many Asian cities groundwater is not only the source of domestic water but also an important resource for industrial development making better management of groundwater resources essential for sustainable development Because groundwater is easier to access and costs less than water from piped systems groundwater abstraction cannot be easily regulated Policies for groundwater management adopted in Japan and other Asian countries are compared and technologies for efficient use of groundwater are elucidated

Groundwater contamination is also a serious problem that exacerbates water scarcity in Asian cities Case studies illustrate the cause and consequences of naturally occurring contaminants such as arsenic and fluoride and groundwater contamination due to anthropogenic contaminants is described Also discussed are technologies for treating contaminated groundwater to reduce the health risks of drinking contaminated groundwater

Australian Environmental Planning Jason Byrne, Neil Sipe, Jago Dodson, 2014-04-16 Winner of the Planning Institute of Australia's 2015 Cutting Edge Research and Teaching Award Australians from all walks of life have begun to realise the nation's cities cannot sustain profligate growth indefinitely Dwindling water supplies failing food bowls increased energy costs more severe bushfires severe storms flooding coastal erosion rising transport expenses housing shortages and environmental pollution are now daily news headlines Australia's cities may have reached their ecological limits a new model for planning the places we live is needed Understanding the natural cycles of the city is just as important to planning our cities as knowledge of local ordinances indeed much more so A profound knowledge of environmental processes is critical for successful planning in today's world Environmental planners take as their guiding principle the concept of designing with nature approaching cities as living organisms that consume water energy and raw materials and produce waste This metabolic view of cities means we can find new solutions to old problems and steer our cities towards a more sustainable form of planning Written specifically for students and professionals working in city planning in Australia this ground breaking new book enables Australian planners architects and developers to get a better understanding of the fundamental principles of environmental planning for cities showing how land water air energy wildlife and people shape our built environments and how in turn environmental processes must be better understood if we are to make informed decisions about developing cities that are more sustainable The book's coverage is comprehensive from an overview of the concepts and theories of environmental planning through analysis of governance systems and urban environmental processes to agendas and policies for the future all the key topics

are covered in depth with recommendations for supporting reading and an unrivalled selection of additional materials Ideal for students essential for professionals Australian Environmental Planning is vital reading for more sustainable cities in a more sustainable world *Sustainable City Regions*: Tetsuo Kidokoro,Noboru Harata,L.P. Subanu,J. Jessen,A. Motte,E.P. Seltzer,2008-08-27 How should regional cities develop regional development strategies for their sustainable future How can such strategies work effectively Regional cities are now at a crossroads will they decline or be regenerated under the impacts of globalization Their sustainable regeneration as creative regional centers will play a decisive role in their sustainable development as a whole but only with viable regional spatial strategies that strengthen the network of cities and their hinterlands The concern here lies in urban regeneration and strategic spatial planning at the city region level This book records observations of 12 dynamically changing regional cities in Asia Europe and the United States The form of the city region urban regeneration and strategic spatial planning as well as the local and regional governance of each city are examined Through this empirical and comparative analysis essential lessons are drawn which will add a new perspective to discussions on the sustainable future of regional cities in an age of globalization Sustainable Urban Transport in an Asian Context Hitoshi Ieda,2010-02-18 Systems of transportation long ago developed out of the profound human need to connect and communicate Transport today is still the only means for the physical movement of goods and people Alongside the evolution of transportation and communication technologies the astounding phenomenon of urbanization has taken place Cities have grown faster and larger absorbing vast influxes of dwellers who seek convenient and comfortable lifestyles with the required fast cheap and safe systems of transport Of the world s megacities with populations of more than ten million over half are in Asia While enjoying large scale economic power Asian megacities also face serious challenges They suffer from too rapid urbanization with the resulting congestion pollution and destruction of traditional local cultures and industries Written by experts from Asian academic institutes this book addresses the urgent question of how to achieve sustainability in the still growing cities of Asia The chapters comprise the latest research and the application of promising measures some already realized in Asia that include urban transport system design and management land use control city planning and sustainability Of vast import this volume was written for students and researchers planners and engineers and all who are interested in sustainable urban environments Following is the structure and rough sketch of the contents of this book Part I The First Step An Overview deals with Asian characteristics from natural cultural and economic viewpoints and then describes how we should grasp the concept of urban sustainability in urban transport in Asia Readers will understand various aspects of Asia as introductory and preparatory knowledge Part II Best Practices from Asia with Wisdom Keys to Success and Facing Limitations will introduce actual comparatively successful and promising measures tried and realized in Asia This part covers various cases from passenger transport to freight transport from transport system design to system management from engineering measures to people s participation from traffic control to land use control and site development Readers will find

an abundance of information and examples in this main part of the book Part III Future of Urban Transport in Asia Rising Asia Proposes to the World discusses key issues and hot topics of study on sustainable city and transport for the future development and management travel demand management growth management site development strategies and financial and institutional measures

Vulnerable Cities: Tetsuo Kidokoro,Junichiro Okata,Shuichi Matsumura,Norihisa Shima,2008-08-25 All cities are vulnerable They have economically socially institutionally vulnerable urban space In developing countries vulnerable urban space can be observed typically as substandard informal settlements such as slums or areas occupied by squatters At present slum dwellers comprise one third of the world s urban population of 3 billion and it has been estimated that the number of slum dwellers will double in the next 30 years if no effective action is taken Improvement of vulnerable urban areas which is one of the targets of Millennium Development Goals is thus an urgent worldwide challenge in our age This book combines empirical and comparative analysis of improvement of vulnerable urban space and post disaster rehabilitation in Asian and Latin American countries The discussions presented herein will serve as a useful thought provoking source for researchers practitioners and students especially for those who are working to alleviate the vulnerability of urban space

Bioenergy Crops Jos T. Puthur,Om Parkash Dhankher,2022-07-07 Bioenergy Crops A Sustainable Means of Phytoremediation comprises a unique combination of topics related to the field of phytoremediation and bioenergy production It highlights the future face of industries in phytoremediation and bioenergy production The book deals with most promising plant and alga species for biomass production and phytoremediation It deals with constructed wetlands bioremediation and microbial fuel cells with case studies of phytoremediation and bioenergy production The comprehensive knowledge on the dual aspects of hyperaccumulators in phytoremediation and bioenergy production guides graduates post graduates as well as researchers to know the latest updates in the field Key Features Presents dual aspects of hyperaccumulators in phytoremediation and bioenergy production Highlights the future face of industries in phytoremediation and bioenergy production Focuses the promising candidates exploits as hyperaccumulator and biomass producers Explains the role of algae and microbes in bioremediation and bioenergy production Represents a comprehensive up to date analysis in the field of phytoremediation as well as bioenergy production
