Molecular Research and Treatment of Urologic Cancer

Urologic cancers exhibit tumor heterogeneity in their morphology, gene expression, and phenotypic features, and have different responses to drug treatment [1]. Thus, it is significant to elucidate the molecular mechanisms of heterogeneity to overcome this therapeutic problem for cancer patients.

Therefore, this Special Issue focuses on urologic cancers. Five research articles and one review article were collected in the Special Issue “Molecular Research and Treatment of Urologic Cancers” to understand the molecular mechanisms of prostate, renal (kidney), and bladder cancer.

(1) Prostate Cancer Research

Filippi et al. published a research article titled “Analysis of the gene networks and pathways correlated with tissue differentiation in prostate cancer”, which tried to correlate gene expression with the Gleason score of prostate cancer. Using The Cancer Genome Atlas (TCGA), a publicly available database of 497 prostate cancer specimens, the authors reported that high Gleason scores were linked to sensitivity to DNA damage, cell division, and telomere elongation. Their findings contribute to a deeper understanding of how gene expression relates to the progression and aggressiveness of PCa [2].

Paulus et al. published a research article titled “The effect of photosensitizer metalation incorporated into arene–ruthenium assemblies on prostate cancer”. The various treatments for prostate cancer have several side effects. However, photodynamic therapy (PDT) has almost no adverse effects. This method uses a combination of photosensitizers and light to kill cells by inducing the generation of reactive oxygen species inside cells. This study investigated the role of metals, including magnesium, cobalt, and zinc, in photosensitizers used in this therapeutic method. The authors demonstrated that these metals can induce destructive effects in prostate cancer cell lines. However, the addition of metals to photosensitizers reduces the efficacy of PDT [3].

(2) Renal Cancer Research

Two research articles on renal cancer have been published.

Jedrzejska et al. published a research article titled “Elevated plasma concentration of 4-pyridone-3-carboxamide-1- β -D-ribo-nucleoside (4PYR) highlights the malignancy of renal cell carcinoma”.

Nicotinamide (NA) is a precursor compound of 4PYR that plays a significant role in multiple biological functions encompassing DNA repair mechanisms, cell cycle progression, and inflammatory processes. 4PYR was previously reported by these authors to be an oncometabolite in breast, lung, and bladder cancer. The authors reported that 4PYR could be an oncometabolite in the clear cell renal cell carcinoma (ccRCC) subtype and that elevated levels of 4PYR are highly correlated with tumor aggressiveness, mortality, recurrence, and metastasis in ccRCC patients. Their results showed 4PYR’s potential as an oncometabolite in the ccRCC subtype [4].

Larrinaga et al. published a research article titled “The Expression of Alamandine Receptor MrgD in Clear Cell Renal Cell Carcinoma Is Associated with Worse Prognosis and Unfavorable Response to Antiangiogenic Therapy”.

Urologic Oncology Cancer Treatment And Research:

Urologic Oncology Timothy L. Ratliff, William J. Catalona, 2012-12-06 The study of genitourinary tumors is an area of recent rapid growth both in the understanding of disease processes and in the development of new diagnostic and therapeutic modalities During rapid growth phases within any field it is desirable to reflect on the current state of the art It is difficult even for experts in reputed areas of advancement to distinguish true advances from false leads but it is far more difficult yet for those whose expertise lies in other areas to evaluate important advances Thus an objective assessment of evolving areas of investigation in the form of a comprehensive review is of considerable value we have attempted to provide the reader with an over In this volume view of some of the current areas of investigation in urologic oncology by experts in each area There often is a tendency for invited papers in books of this nature to lack important critical peer review and therefore suffer from a lack of objectivity We have attempted to diminish this problem by the selection of two experts to discuss each subject We believe that this format has improved the overall quality of the book for two reasons 1 the knowledge of each contributor that his or her work would be reviewed by a peer 2 the fact that contributions by encourages more rigorous scholarship and two experts including the individual insights of each provides a better perspective for the reader

Treatment Options in Urological Cancer Jonathan Waxman, 2008-04-15 Cancer forms a large part of urological practice Prostate cancer is the most significant and is the second most common cause of male cancer deaths with some 300 000 cases in the USA annually Cancer of the bladder is also common While treatment has been primarily surgical recent years have seen an explosion of new drug therapies for urological cancers All urologists whether in training or in practice need an up to date survey of the literature and key findings in this important and controversial field This book takes each organ in turn prostate kidney bladder testis and penis and tackles the controversies head on by inviting chapters on various often rival treatments for each disease Each section is then concluded by a commentary from the editor which draws together the various strands outlines the principal areas of consensus and disagreement Jonathan Waxman is an oncologist who specialises in urological tumours and has developed new treatments for prostate bladder and kidney cancer and for terminal care which are now part of standard practice He founded the Prostate Cancer Charity and helped establish an all party parliamentary group to improve cancer treatment and research throughout the UK Urological Oncology Vinod H.

Nargund, Derek Raghavan, Howard M. Sandler, 2015-01-17 As a professional resource for all doctors oncologists and urologists involved in the care of uro oncology patients this book puts emphasis on developing advanced practice with in depth discussions to support evidence based patient focused care Urological Oncology Second Edition offers an updated multi disciplinary and multi professional approach to the assessment diagnosis treatment and follow up care of patients being investigated and treated for urological malignancies Mainly aimed at oncologists and urologists it is also useful for general physicians as well as trainee nurses and nurse practitioners in urology urological oncology **Chemotherapy and**

Urological Malignancy A.S.D. Spiers, 2012-12-06 Chemotherapy for malignant disease has brought about many rapid and often spectacular improvements in the survival rate of some groups of patients Yet enthusiasm for these successes has in part been offset by the problems in evaluating responses to treatment and by the disappointment of failing to check the progress of still so many other tumours These reactions will be no surprise to the medical historian but perhaps the expectations from scientific progress nowadays sometimes demand more than can reasonably be expected Another expectation is that any review of chemotherapy is completely up to date even prophetic Such is the expansion of the subject that new drugs and trial results are continually being reported but it is this very mass of information that creates its own problems and makes many clinicians despair of finding a balanced judgement on all of this information This was the challenge accepted by Professor Spiers He then gathered together a group of colleagues who are amongst the acknowledged leaders in the field of chemotherapy for urological tumours all of whom have made important contributions to this subject However each chapter is not merely a record of the author's experience but encompasses an assessment of past and present practice as well as perspectives in diagnosis and management Almost all chapters include reference to published work up to and including 1981

Treatment of Cancer Fifth Edition Pat Price, Karol Sikora, Tim Illidge, 2008-05-30 Since the first edition was published in 1982 Treatment of Cancer has become a standard text for postgraduate physicians in the UK and beyond providing all information necessary for modern cancer management in one comprehensive but accessible volume By inviting experts from a number of disciplines to share their knowledge the editors have succeeded in delivering a truly integrated approach to the care of the patient with cancer This fifth edition adopts the successful structure of previous editions whilst being thoroughly revised and updated and with several completely new chapters covering important topics such as drug development cancer prevention and economics of cancer care as well as treatments such as radioimmunotherapy biological therapies and antibody therapy Part One considers the scientific basis and fundamental principles underlying cancer treatment and examines the likely developments that will occur over the next decade at the leading edge of oncology Part Two is divided into two sections the first covering general issues of cancer management including planning techniques concomitant chemoradiotherapy surgical oncology and palliative care and the second using a system based approach to cover the clinical aspects and management plans for the whole spectrum of malignant disease Treatment of Cancer surpasses other oncology texts in condensing the essential information for exemplary cancer care into one readable and accessible guide and will be an invaluable addition to the bookshelves of the busy oncologist in training or in practice
