Nesse, MD,2019-02-12 A founder of the field of evolutionary medicine uses his decades of experience as a psychiatrist to provide a much needed new

framework for making sense of mental illness Why do I feel bad There is real power in understanding our bad feelings With his classic *Why We Get Sick* Dr Randolph Nesse helped to establish the field of evolutionary medicine Now he returns with a book that transforms our understanding of mental disorders by exploring a fundamentally new question Instead of asking why certain people suffer from mental illness Nesse asks why natural selection has left us all with fragile minds Drawing on revealing stories from his own clinical practice and insights from evolutionary biology Nesse shows how negative emotions are useful in certain situations yet can become overwhelming Anxiety protects us from harm in the face of danger but false alarms are inevitable Low moods prevent us from wasting effort in pursuit of unreachable goals but they often escalate into pathological depression Other mental disorders such as addiction and anorexia result from the mismatch between modern environment and our ancient human past And there are good evolutionary reasons for sexual disorders and for why genes for schizophrenia persist Taken together these and many more insights help to explain the pervasiveness of human suffering and show us new paths for relieving it by understanding individuals as individuals

Darwin's Roadmap to the Curriculum Glenn Geher, David Sloan Wilson, Hadassah Head, Andrew Gallup, 2019-05-01 There is a paradox when it comes to Darwinian ideas within the academy On one hand Darwin's theories have famously changed the foundational ideas related to the origins of life shaping entire disciplines in the biological sciences On the other hand people in educated societies across the globe today are famously misinformed and uneducated about Darwinian principles and ideas Applications of evolutionary theory outside the traditional areas of biology have been slow to progress and scholars doing such work regularly run into all kinds of political backlash However a slow but steady push to advance the teaching of evolution across academic disciplines has been under way for more than a decade This book serves to integrate the vast literature in the interdisciplinary field of Evolutionary Studies EvoS providing clear examples of how evolutionary concepts relate to all facets of life Further this book provides chapters dedicated to the processes associated with an EvoS education including examples of how an interdisciplinary approach to evolutionary theory has been implemented successfully at various colleges universities and degree programs This book also offers chapters outlining a variety of applications to an evolution education including improved sustainable development medical practices and creative and critical thinking skills Exploring controversies surrounding evolution education this volume provides a roadmap to asking and answering Darwinian questions across all areas of intellectual inquiry [Animal Madness](#) Laurel Braitman, 2014-06-10 Science Friday Summer Reading Pick Discover magazine Top 5 Summer Reads People magazine Best Summer Reads A lovely big hearted book brimming with compassion and the tales of the many many humans who devote

susceptibility to disease and ultimately help guide treatment prevention and public health policy However integrating evolutionary biology into medical education continues to face several roadblocks The medical curriculum is already replete with complex subjects and a long period of training The addition of an evolutionary perspective to this curriculum would certainly seem daunting and many medical educators express concern over potential controversy if evolution is introduced into the curriculum of their schools Medical education urgently needs strategies and teaching aids to lower the barriers to incorporating evolution into medical training In summary this call to arms makes a strong case for incorporating evolutionary thinking early in medical training to help guide the types of critical questions physicians ask or should be asking It will be of relevance and use to evolutionary biologists physicians medical students and biomedical research scientists
