in social science research this practical guide to time series models is the first in the field written for a non econometrics audience Giving readers the tools they need to apply models to their own research Introduction to Time Series Analysis by Mark Pickup demonstrates the use of and the assumptions underlying common models of time series data including finite distributed lag autoregressive distributed lag moving average differenced data and GARCH ARMA ARIMA and error correction models This volume does an excellent job of introducing modern time series analysis to social scientists who are already familiar with basic statistics and the general linear model William G Jacoby Michigan State University Causal Analysis with Panel Data Steven E. Finkel, 1995-01-17 Panel data which consist of information gathered from the same individuals or units at several different points in time are commonly used in the social sciences to test theories of individual and social change This book provides an overview of models that are appropriate for the analysis of panel data focusing specifically on the area where panels offer major advantages over cross sectional research designs the analysis of causal interrelationships among variables Without painting panel data as a cure all for the problems of causal inference in nonexperimental research the author shows how panel data offer multiple ways of strengthening the causal inference process In addition he shows how to estimate models that contain a variety of lag specifications reciprocal effects and imperfectly measured variables Appropriate for readers who are familiar with multiple regression analysis and causal modeling this book will offer readers the highlights of developments in this technique from diverse disciplines to analytic traditions **Research Methods for Public Administrators** Gary Rassel, Suzanne Leland, Zachary Mohr, Elizabethann O'Sullivan, 2020-12-29 Research Methods for Public Administrators contains a thorough overview of research methods and statistical applications for advanced undergraduate and graduate students and practitioners The material is based on established social science methods Concepts and applications are discussed and illustrated with examples from actual research The book covers research design methods of data collection instructions on formulating research plans measurement sampling procedures and statistical applications from basic statistics to more advance techniques The basics of conducting experiments survey research case studies and focus groups are discussed Data organization management and analysis are also covered as are data analysis and hypothesis testing Descriptive and inferential statistics are discussed and illustrated with examples The book also includes a chapter on obtaining and analyzing secondary data data already collected for other purposes and a chapter on reporting and presenting research results to a variety of audiences This is a general textbook written primarily for students of public administration and practitioners in public and not for profit organizations It includes materials shown to be useful in gathering and assessing information for making decisions and implementing policies The material is discussed at a level to be accessible and with enough detail to be useful New to the seventh edition Additional and expanded material on qualitative research big data metadata literature reviews and causal inference New material on experiments and experimental research New examples and case studies including those dealing with public policy Expanded

material on using computers for data management Information on new NSF and NIH ethics and protection of human subjects requirements for researchers New data sets and Power Point slides for each chapter **Causal Modeling** Herbert B.
