problems **Design and Analysis of Time Series Experiments** Richard McCleary, David McDowall, Bradley Bartos, 2017-05-11 *Design and Analysis of Time Series Experiments* presents the elements of statistical time series analysis while also addressing recent developments in research design and causal modeling. A distinguishing feature of the book is its integration of design and analysis of time series experiments. Readers learn not only how to skills but also the underlying rationales for design features and analytical methods. ARIMA algebra, Box-Jenkins, Tiao models and model building strategies for forecasting and Box-Tiao impact models are developed in separate chapters. The presentation of the models and model building assumes only exposure to an introductory statistics course, with more difficult mathematical material relegated to appendices. Separate chapters cover threats to statistical conclusion validity: internal validity, construct validity, and external validity, with an emphasis on how these threats arise in time series experiments. Design structures for controlling the threats are presented and illustrated through examples. The chapters on statistical conclusion validity and internal validity introduce Bayesian methods, counterfactual causality, and synthetic control group designs. Building on the earlier time series books by McCleary and McDowall, *Design and Analysis of Time Series Experiments* includes recent developments in modeling and considers design issues in greater detail than does any existing work. Drawing examples from criminology, economics, education, pharmacology, public policy, program evaluation, public health, and psychology, the text is addressed to researchers and graduate students in a wide range of behavioral, biomedical, and social sciences. It will appeal to those who want to conduct or interpret time series experiments as well as to those interested in research designs for causal inference.

Interrupted Time Series Analysis David McDowall, Richard McCleary, Bradley J. Bartos, 2019-09-16 *Interrupted Time Series Analysis* develops a comprehensive set of models and methods for drawing causal inferences from time series. It provides example analyses of social, behavioral, and biomedical time series to illustrate a general strategy for building Autoregressive Integrated Moving Average (ARIMA) impact models. Additionally, the book supplements the classic Box-Jenkins-Tiao model building strategy with recent auxiliary tests for transformation, differencing, and model selection. Not only does the text discuss new developments, including the prospects for widespread adoption of Bayesian hypothesis testing and synthetic control group designs, but it makes optimal use of graphical illustrations in its examples. With forty completed example analyses that demonstrate the implications of model properties, *Interrupted Time Series Analysis* will be a key interdisciplinary text in classrooms, workshops, and short courses for researchers familiar with time series data or cross-sectional regression analysis but limited background in the structure of time series processes and experiments.
