Tissue Culture Techniques For Horticultural Crops:

Tissue Culture Techniques for Horticultural Crops Kenneth C. Torres, 2012-12-06 This book was written for those individuals who are concerned about the techniques and practices of plant cell cultures for horticultural crops. It was designed to serve as a text and reference for students and professionals in ornamental horticulture, fruit and vegetable crop production, botany, forestry and other areas of plant science. Research during the last twenty five years in the area of plant tissue culture has led to many developments and changes in this field. Although the techniques involved in the manipulation of plant tissue culture are now relatively straightforward, the presentation of these techniques in a short volume for the beginner in the field is generally unavailable. In addition to describing the techniques for establishment and manipulation of specific species, several chapters in this book also provide a brief general review of important cultural parameters. Specific protocols and laboratory procedures may also be found in the appendix. I hope that this presentation of information will be helpful to those individuals wanting to apply plant tissue culture techniques for horticultural crops. **Tissue Culture as a Plant Production System for Horticultural Crops** Richard H. Zimmerman, 1986-07-31 Conference on Tissue Culture as a Plant Production System for Horticultural Crops, Beltsville MD, October 20-23, 1985. **Commercial Scale Tissue Culture for Horticulture and Plantation Crops** Shubhpriya Gupta, Preeti Chaturvedi, 2022-06-16 This edited book is focusing on the novel and innovative procedures in tissue culture for large scale production of plantation and horticulture crops. It is bringing out a comprehensive collection of information on commercial scale tissue culture with the objective of producing high quality, disease free and uniform planting material. Developing low cost commercial tissue culture can be one of the best possible ways to attain the goal of sustainable agriculture. Tissue culture provides a means for rapid clonal propagation of desired cultivars and a mechanism for somatic hybridization and in vitro selection of novel genotypes. Application of plant tissue culture technology in horticulture and plantation crops provides an efficient method to improve the quality and nutrition of the crops. This book includes a description of highly efficient, low cost in vitro regeneration protocols of important plantation and horticulture crops with a detailed guideline to establish a commercial plant tissue culture facility including certification, packaging and transportation of plantlets. The book discusses somatic embryogenesis, virus elimination, genetic transformation, protoplast fusion, haploid production, coculture of endophytic fungi, effects of light and ionizing radiation as well as the application of bioreactors. This book is useful for a wide range of readers such as academicians, students, research scientists, horticulturists, agriculturists, industrial entrepreneurs and agro industry employees. **Tissue culture as a plant production system for horticultural crops** Richard H. Zimmerman, Robert J. Griesbach, Freddi A. Hammerschlag, R.H. Lawson, 2012-12-06 In 1980 a conference on tissue culture of fruit crops was held at Beltsville to summarize the current status of this technology and to stimulate interest in it among research scientists, students and commercial producers in the U.S. Interest in that conference and the proceedings from it far exceeded the expectations of the organizing committee. Since

that time micropropagation of fruit crops in the U S has increased significantly but still lags far behind applications to production of ornamental plants Within the past two years a number of new laboratories have been established and some of the existing laboratories have expanded to a size far larger than any previously anticipated Creation of new laboratories capable of producing more than 400 000 plants per week will test the ingenuity of laboratory managers and the skills of marketing departments In recent years numerous symposia have been held on various aspects of biotechnology and genetic engineering Although micro propagation is the key to providing large numbers of genetically engineered plants it is a topic that has been relegated to a minor position or ignored completely at such meetings Accordingly the time seemed propitious for a conference devoted solely to all aspects of micropropagation as applicable to horticultural crops **Biotechnological**
