Writing A Biomedical Research Paper A Guide To Structure And Style:

Writing a Biomedical Research Paper Brian Budgell, 2008-12-05 All of us in biomedicine understand the urgency of getting experimental results into print as quickly as possible Yet this critical step in the cascade from research conception to publication receives almost no attention in our formal training It is as if we have been put to sea without a compass Our collective failure to achieve widespread literacy in our own language Biomedical Language seriously impedes the important process of disseminating new biomedical knowledge and thereby improving the human condition It is also a significant personal concern for researchers and clinicians in the highly competitive publish or perish environment of contemporary academia Of course if we are clever or lucky enough to come up with that Nobel Prize winning discovery great science will carry the day and we are likely to get published even if our writing is fairly horrid But most of us who publish are bread and butter scientists We compete for space in journals which may only accept 10% or 20% of the submissions that they receive each year For us convincing engaging writing will make the difference between being published or rejected or at least it will make the difference between being published on first submission or having to go through a number of revisions or journals None of this is to propose that good writing can make a silk purse out of a sow's ear Scientific content is the sine qua non of biomedical writing
