Writing For Biomedical Journals:

Writing for Biomedical Publication David C. Morrison, Christopher James Papasian, 2017 *Principles of Scientific Writing and Biomedical Publication* Phil B. Fontanarosa, Annette Flanagan, Philip Greenland, 2024 Publication of biomedical research is essential for improvement and advancement of medical science and clinical practice The history of scientific publication including journals devoted to medical science dates to the 1600s The number of peer reviewed scientific journals is estimated to be in the tens of thousands and the number of journals especially with the increasing creation of open access publications continues to expand Yet despite the long history of and ubiquitous nature of scientific publications the core principles involved in biomedical publication as well as the specific skills of writing and manuscript preparation are not commonly taught in a formal or comprehensive way in medicine public health or research curricula

Writing a Biomedical Research Paper Brian Budgell, 2008-12-05 All of us in biomedicine understand the urgency of getting experimental results into print as quickly as possible Yet this critical step in the cascade from research conception to publication receives almost no attention in our formal training It is as if we have been put to sea without a compass Our collective failure to achieve widespread literacy in our own language Biomedical Language seriously impedes the important process of disseminating new biomedical knowledge and thereby improving the human condition It is also a significant personal concern for researchers and clinicians in the highly competitive publish or perish environment of a temporary academia Of course if we are clever or lucky enough to come up with that Nobel Prize winning discovery great science will carry the day and we are likely to get published even if our writing is fairly horrid But most of us who publish are bread and butter scientists We compete for space in journals which may only accept 10% or 20% of the submissions that they receive each year For us convincing engaging writing will make the difference between being published or rejected or at

least it will make the difference between being published on first submission or having to go through a number of revisions or journals. None of this is to propose that good writing can make a silk purse out of a sow's ear. Scientific content is the sine qua non of biomedical writing.
