Written in Stone Brian Switek, 2010 The epic quest for missing links and other myths about evolution **Written in Stone** Riley Black, 2010 Proposes that the strides made in paleontology have helped with understanding evolution and discusses how fossils prominent scientists technology and other factors have each influenced the theory s development

Written in Stone (Icon Science) Brian Switek, 2017-03-02 Darwin s theory of evolution was for more than a century dogged by a major problem the evidence proving the connections between the main groups of organisms was nowhere to be found By the 1970s this absence of transitional fossils was hotly debated some palaeontologists wondered if these missing links had been so quick that no trace of them was left However during the past three decades fossils of walking whales from Pakistan feathered dinosaurs from China fish with feet from the Arctic Circle ape like humans from Africa and many more bizarre creatures that fill in crucial gaps in our understanding of evolution have all been unearthed The first account of the hunt for evolution s missing links *Written in Stone* shows how these discoveries have revolutionised palaeontology and explores what its findings might mean for our place on earth **The Language of Trees: A Rewilding of Literature and Landscape** Katie Holten, 2023-04-04 NATIONAL BESTSELLER Inspiring insights that are scientific intimate and surprising a call to action for those who still care The Washington Post Inspired by forests trees leaves roots and seeds *The Language of Trees A Rewilding of Literature and Landscape* invites readers to discover an unexpected and imaginative language to better read and write the natural world around us and reclaim our relationship with it In this gorgeously illustrated and deeply thoughtful collection Katie Holten gifts readers her tree alphabet and uses it to masterfully translate and illuminate beloved lost and new original writing in praise of the natural world With an introduction from Ross Gay and featuring writings from over fifty contributors including Ursula K Le Guin Ada Lim n Robert Macfarlane Zadie Smith Radiohead Aimee Nezhukumatathil James Gleick Elizabeth Kolbert Plato and Robin Wall Kimmerer Holten illustrates each selection with an abiding love and reverence for the magic of trees She guides readers on a journey from creation myths and cave paintings to the death of a 3 500 year old cypress tree from Tree Clocks in Mongolia and forest fragments in the Amazon to the language of fossil poetry unearthing a new way to see the natural beauty all around us and an urgent reminder of what could happen if we allow it to slip away *The Language of Trees* considers our relationship with literature and landscape resulting in an astonishing fusion of storytelling and art and a deeply beautiful celebration of trees through the ages **Some Assembly Required** Neil Shubin, 2020-03-17 An exciting and accessible new view of the evolution of human and animal life on Earth From the author of national bestseller *Your Inner Fish* this extraordinary journey of discovery spans centuries as explorers and scientists seek to understand the origins of life s immense diversity Fossils DNA scientists with a penchant for suits of armor what s not to love BBC Wildlife Magazine Over billions of years ancient fish evolved to walk on land reptiles transformed into birds that fly and apelike primates evolved into humans that walk on two legs talk and write For more than

a century paleontologists have traveled the globe to find fossils that show how such changes have happened We have now arrived at a remarkable moment prehistoric fossils coupled with new DNA technology have given us the tools to answer some of the basic questions of our existence How do big changes in evolution happen Is our presence on Earth the product of mere chance This new science reveals a multibillion year evolutionary history filled with twists and turns trial and error accident and invention In *Some Assembly Required* Neil Shubin takes readers on a journey of discovery spanning centuries as explorers and scientists seek to understand the origins of life s immense diversity

The Human Instinct Kenneth R. Miller, 2019-04-23 From one of America s best known biologists a revolutionary new way of thinking about evolution that shows why in light of our origins humans are still special Edward J Larson Pulitzer Prize winning author of *Evolution* Once we had a special place in the hierarchy of life on Earth a place confirmed by the literature and traditions of every human tribe But then the theory of evolution arrived to shake the tree of human understanding to its roots To many of the most passionate advocates for Darwin s theory we are just one species among multitudes no more significant than any other Even our minds are not our own they tell us but living machines programmed for nothing but survival and reproduction In *The Human Instinct* Brown University biologist Kenneth R Miller confronts both lay and professional misconceptions about evolution Publishers Weekly starred review showing that while evolution explains how our bodies and brains were shaped that heritage does not limit or predetermine human behavior In fact Miller argues in this highly recommended Forbes work that it is only thanks to evolution that we have the power to shape our destiny Equal parts natural science and philosophy *The Human Instinct* makes an absorbing lucid and engaging case that it was evolution that gave us our humanity Ursula Goodenough professor of biology at Washington University in St Louis

American Dinosaur Abroad Ilja Nieuwland, 2019-05-15 In early July 1899 an excavation team of paleontologists sponsored by Andrew Carnegie discovered the fossil remains in Wyoming of what was then the longest and largest dinosaur on record Named after its benefactor the *Diplodocus carnegii* or Dippy as it s known today was shipped to Pittsburgh and later mounted and unveiled at the Carnegie Museum of Natural History in 1907 Carnegie s pursuit of dinosaurs in the American West and the ensuing dinomania of the late nineteenth century coincided with his broader political ambitions to establish a lasting world peace and avoid further international conflict An ardent philanthropist and patriot Carnegie gifted his first plaster cast of Dippy to the British Museum at the behest of King Edward VII in 1902 an impulsive diplomatic gesture that would result in the donation of at least seven reproductions to museums across Europe and Latin America over the next decade in England Germany France Austria Italy Russia Argentina and Spain In this largely untold history Ilja Nieuwland explores the influence of Andrew Carnegie s prized skeleton on European culture through the dissemination reception and agency of his plaster casts revealing much about the social political cultural and scientific context of the early twentieth century

Human underscores our inextricable interconnectedness with other forms of creatural life and suggests that stories can be used to resituate imaginaries of human action in a more than human world [This is Planet Earth](#) New Scientist,2018-08-07 The Earth as you've never seen it before The ancient Greeks called it Gaia the Romans Terra We know it simply as Earth the planet we call home And what a planet it is Formed around 4.6 billion years ago from the debris of the big bang and long dead stars at first it was nothing special but somehow it evolved to become the most amazing place in the known Universe The only living planet we know of it also has a very unusual moon a remarkably dynamic surface a complex atmosphere and a deeply mysterious interior This is Planet Earth is dedicated to the wonders of planet Earth Its past is long and dramatic and its future shrouded in mystery Yet despite centuries of research only now are we starting to understand Earth's complexity

The Redesigned Earth John T. Tanacredi,2019-12-12 This book provides insight into the basic aspects of ecology that impact or are affected by engineering practices Ecological principals are described and discussed through the lens of the influences that built structures have on the Earth's biological geological and chemical systems The text goes on to elucidate the engineering influences that have or will influence the face of the Earth These influences redesign the Earth either by destroying natural systems and replacing them with highly subsidized systems or by attempting to restore highly disturbed or contaminated systems with the basic natural systems that were originally present **Arthur Machen** Antonio Sanna,2021-04-21 Arthur Machen Critical Essays offers a study of the works by Arthur Machen 1863-1947 the Welsh writer who has attracted a cult following for decades especially among fans and scholars of weird fiction and Gothic studies These essays take readers into different areas and address several topics in Machen's literary production the literary the artistic the scientific the religious the socio-cultural and the personal The twelve chapters constituting the volume examine the representation of human beings in the writer's works and their relationship with the surrounding environment whether it is the omnipresent London or the mysterious menacing nature The contributors also interpret Machen's writings through a series of disciplines and academic theories that were contemporary to the writer such as paleontology and medicine and demonstrate how he was influenced by the scientific discourses of his time and reproduced them in his works The last section of the volume considers Machen's interest in the occult and mysticism and the religious themes present in many of his works

Religion, Culture, and the Monstrous Joseph P. Laycock,Natasha L. Mikles,2021-02-15 Religion Culture and the Monstrous Of Gods and Monsters explores the intersection of the emerging field of monster theory within religious studies With case studies from ancient Mesopotamia to contemporary valleys of the Himalayas to ghost tours in Savannah Georgia the volume examines the variegated nature of the monstrous as well as the cultural functions of monsters in shaping how we see the world and ourselves In this the authors constructively assess the state of the two fields of monster theory and religious studies and propose new directions in how these fields can inform each other The case studies included illuminate the ways in which monsters reinforce the categories through which a given culture sees the world At the same time the

volume points to how monsters appear to question disrupt or challenge those categories creating an unsettling or surplus of meaning

Infinite Life Jules Howard, 2024-09-03 An expansive investigation into the most unifying and enduring structure in the history of life and a story of biological richness at a moment when so much of our precious biodiversity hangs in the balance Eggs are the origins of ninety percent of the Earth's organisms They can be found as far apart as deep sea volcanoes and in space Yet despite their fundamental importance eggs often find themselves an afterthought in the discussion of evolution of life on Earth as the interests of scientists congregate around the things that emerge from eggs rather than the eggs themselves In his new book *Infinite Life: The Revolutionary Story of Eggs, Evolution and Life on Earth* Jules Howard explains with great passion authority expertise and infectious enthusiasm why it's time to give eggs their moment in the spotlight it is the eggs that can teach us new and surprising lessons about Earth's history the trials of life and the exceptional ways in which natural selection operates to propagate the survival of individual species *Infinite Life: The Revolutionary Story of Eggs, Evolution and Life on Earth* offers a wholly new perspective on the animal kingdom and indeed life on Earth By examining eggs from their earliest histories to the very latest fossilized discoveries encompassing the myriad changes and mutations of eggs from the evolution of yolk to the hard eggshells of lost dinosaurs to the animals that have evolved to simultaneously give birth to eggs and live young Howard reveals untold stories of great diversity and majesty to shed light on the huge impact that egg science has on our lives

The Best Science Writing Online 2012 Bora Zivkovic, 2012-09-18 Showcasing more than 50 of the most provocative original and significant online essays from 2011 this collection provides a comprehensive look at the fascinating innovative and trailblazing scientific achievements and breakthroughs of 2011 along with elegant and thought provoking new takes on favorite topics

Fathoms Rebecca Giggs, 2021-07-20 When writer Rebecca Giggs encountered a humpback whale stranded on her local beachfront in Australia she began to wonder how the lives of whales reflect the condition of our oceans

Abominable Science! Daniel Loxton, Donald R. Prothero, 2013-08-06 A sharp analysis of the quest for unreal critters cryptids as they are called and the people who pursue them entertaining and thoroughly documented *The Wall Street Journal* Throughout our history humans have been captivated by mythic beasts and legendary creatures Tales of Bigfoot the Yeti and the Loch Ness monster are part of our collective experience Now comes a book from two dedicated investigators that explores and elucidates the fascinating world of cryptozoology Daniel Loxton and Donald R. Prothero have written an entertaining educational and definitive text on cryptids presenting the arguments both for and against their existence and systematically challenging the pseudoscience that perpetuates their myths After examining the nature of science and pseudoscience and their relation to cryptozoology Loxton and Prothero take on Bigfoot the Yeti or Abominable Snowman and its cross cultural incarnations the Loch Ness monster and its highly publicized sightings the evolution of the Great Sea Serpent and Mokele Mbembe or the Congo dinosaur They conclude with an analysis of the psychology behind the persistent belief in paranormal phenomena identifying the major

players in cryptozoology discussing the character of its subculture and considering the challenge it poses to clear and critical thinking in our increasingly complex world As valuable for its analysis of the hunted as it is for the light it shines on the still hopeful hunters Publishers Weekly Highly recommended for readers looking for scientific but accessible evaluations of the existence of five notable cryptids that have captured our imaginations Library Journal starred review

Science Museums in Transition Carin Berkowitz, Bernard Lightman, 2017-07-19 The nineteenth century witnessed a dramatic shift in the display and dissemination of natural knowledge across Britain and America from private collections of miscellaneous artifacts and objects to public exhibitions and state sponsored museums The science museum as we know it an institution of expert knowledge built to inform a lay public was still very much in formation during this dynamic period Science Museums in Transition provides a nuanced comparative study of the diverse places and spaces in which science was displayed at a time when science and spectacle were still deeply intertwined when leading naturalists curators and popular showmen were debating both how to display their knowledge and how and whether they should profit from scientific work and when ideals of nationalism class politics and democracy were permeating the museum s walls Contributors examine a constellation of people spaces display practices experiences and politics that worked not only to define the museum but to shape public science and scientific knowledge Taken together the chapters in this volume span the Atlantic exploring private and public museums short and long term exhibitions and museums built for entertainment education and research and in turn raise a host of important questions about expertise and about who speaks for nature and for history

Atheism for Beginners Michael Palmer, 2013-02-28 Hurray for Michael Palmer is how Michael Martin the distinguished American philosopher greeted Palmer s The Atheist s Primer Lutterworth 2012 Atheism for Beginners by providing a coursebook for schools and colleges differs from its predecessor in being designed specifically for teachers and their students Yet although different in focus and format the intention remains the same to reinstate the importance of philosophy within the debate about God s existence and to act as a corrective to the largely Darwinian criticisms levelled against religious belief by Richard Dawkins and the so called new atheists So in Palmer s lively history of atheism extending from the ancient Greeks to the present day we meet the enduring philosophical arguments against God and the great literature in which they are expressed Atheism for Beginners is user friendly and presumes no special grounding in philosophy Throughout assistance is given by numerous aids to learning there are exercises marginal notes essay questions bibliographies and a glossary Also provided are fourteen short biographies of famous atheists In these respects Palmer follows the format first presented in his widely read Moral Problems of 1991 long established as a core text in the teaching of philosophy In Atheism for Beginners Palmer covers the main atheistic arguments discussing issues such as creation morality evil miracles and the motivations of belief Particular attention is paid to the work of Hume Marx Nietzsche and Freud with a special chapter devoted to the development of disproof atheism Atheism is often criticized for being unduly pessimistic that without God there is nothing to look forward to

no life after death no final righting of wrongs and no hope of salvation But this Palmer argues is a slander against the atheistic outlook He concludes therefore on a positive note explaining that happiness and personal fulfilment are to be found in the very materialism that religious belief rejects *Delusions in Science and Spirituality* Susan B.
