Clinical Relevance of the Immune-to-Brain and Brain-to-Immune Communications Julie Lasselin,Martin

Hadamitzky,Manfred Schedlowski,Mats Lekander,2019-03-29 Experimental and clinical evidence demonstrates an intense crosstalk among the nervous endocrine and immune systems The central nervous system CNS not only has the capacity to affect peripheral immune function but is also able to sense and process signals from the peripheral immune system The bi directional interaction between the CNS and the peripheral immune system has gained great interest as it can help better understand disease pathophysiology as well as improving health and treatment outcomes in patients On the one hand inflammatory factors are known to affect CNS functions and to induce neuropsychiatric symptoms making immune to brain communication highly relevant for psychiatric diseases and their treatments On the other hand analyzing pathways of brain to immune communication will help to understand the pathophysiology of chronic inflammatory disorders and will form the basis for optimizing treatment of these diseases **Index Medicus** ,2001-06 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **Sea Ice** David N.
