Model-oriented Systems Engineering Science Duane W. Hybertson, 2016-04-19
Systems engineering (SE) is experiencing a significant expansion that encompasses increasingly complex systems. However, a common body of knowledge on how to apply complex systems engineering (CSE) has yet to be developed. A combination of people and other autonomous agents crossing organization boundaries and continually changing these hybrid systems are less predictable while being more self-organizing and adaptive than traditional systems. The growing pains of this evolution and the ever-widening reach of SE technology require an effective foundation for integrating traditional and complex engineering methods addressing machine and human interaction as well as scaling up and down from nano scale to the macro system of systems level. Model-oriented Systems Engineering Science: A Unifying Framework for Traditional and Complex Systems addresses solutions to that expansion and integration problem. This text takes advantage of better understood systems science (SS) to support the transition, identifying and using commonalities between complex systems and other sciences such as biology, sociology, cognitive science, organizational theory, and computational science. The author defines Model-oriented Systems Engineering Science (MOSES) as an organized system that selects appropriate information from these disciplines and unifies it into a coherent framework. The result is a seamless approach to the class of systems across the extended scope of the new SE, a foundation upon which to develop an enhanced and unified SE. Modeling orientation (MO) provides a common perspective on the entire SES (SE enterprise) including all supporting sciences, engineering for the full range of traditional, complex, and hybrid systems, and their management. This book extends existing modeling approaches into an MO that views all science artifacts and engineering artifacts as models of systems. It organizes them into a virtual structured repository called the SE model space, effectively a container for the accumulating body of SE and SES knowledge in the form of models and patterns. By organizing and integrating all these elements into a common framework, the author makes the material not only easily accessible but also immediately applicable and provides a well-grounded basis for future growth and evolution of the SE discipline.

Evidence-Based Programming for Older Adults Marcia G. Ory, Matthew Lee Smith, 2015-06-17
There is increased world-wide concern about the impact of multiple chronic conditions, especially among the rapidly aging population. Simultaneously, over the past decade, there has been an emergence of state-wide and national initiatives to reduce the burden of chronic conditions that draw upon

the translation of evidence based programs EPB into community practice Yet little has been written about the national and international implementation dissemination and sustainability of such programs This Research Topic features articles about EBPs for older adults including a range of articles that focus on the infrastructure needed to widely disseminate EBP as well as individual participant impacts on physical mental and social aspects of health and well being Using a pragmatic research perspective this Research Topic will advance knowledge that aims to enhance practice inform policy and build systems of support and delivery in regard to the reach effectiveness adoption implementation and maintenance of evidence based interventions for older adults The focus is on knowledge transfer rather than knowledge generation but with a dual emphasis on the dissemination and sustainability of EBP that have been tested and shown effective as well as the adaptation of practice based interventions into evidence based programs This Research Topic draws upon grand scale efforts to deliver these programs and include both U S as well as international examples Commentaries discuss processes in the development and measurement of EBP and reflect perspectives from program developers and major national and regional funders of EBP as well as professionals and practitioners in the field The full length articles focus on four major programmatic areas 1 chronic disease self management programs 2 fall prevention programs 3 general wellness and physical activity programs and 4 mental health programs Additionally articles are included to discuss cross cutting issues related to building partnerships and the research infrastructure for the implementation evaluation and dissemination of evidence based programming The intent of this Research Topic is to enhance practice inform policy and build systems of support and delivery for EBP It is written for a diverse audience and contains practical implications and recommendations for introducing delivering and sustaining EBP in a multitude of settings

Characterisation of Soft Magnetic Materials

Under Rotational Magnetisation Stanislaw Zurek,2017-11-22 The book presents practical aspects related to the measurement of rotational power loss in soft magnetic materials The book furthermore focuses on practical aspects of performing such measurements the associated difficulties as well as solutions to the most common problems Numerous practical aspects hands on experience and most commonly encountered pitfalls are heavily discussed in the book The text begins with introduction to magnetism then follows with definitions of measurement methods of rotational power loss from physical viewpoint Two chapters describe and detail the various sensors which can be employed for such measurements as well as all the aspects of designing making and using a magnetising apparatus A synthesis of the likely optimal design of a magnetising apparatus is also given preceded with the full reasoning based on all the research carried out to date

Characterisation of Soft Magnetic Materials Under Rotational Magnetisation serves as an excellent starting point for any student having to perform magnetic measurements under rotational magnetisation but also under 1D 2D or 3D excitation Because the methods sensors and apparatus are extensively discussed it will also be a great reference for more senior

researchers and experts in the field There is a whole chapter devoted to analysis of measurement uncertainty This subject is rarely published for magnetic measurements which makes it more difficult for all researchers to understand the concepts and methodology used in uncertainty estimation This chapter not only introduces the whole subject but also provides multiple step by step examples which can be easily followed from very simple cases to much more complex ones All equations are presented with full SI units which greatly helps in practical application of the presented methodology Each chapter is written in such a way that it can be studied on its own so that the reader can focus only on the specific aspects as required
