Transport And Ethics Transport And Ethics:

Transport and Ethics Bert van Wee, 2011 Prof van Wee draws on extensive research and nearly three decades of professional experience to shine a welcome spotlight on a neglected yet critical area of transportation research and practice the role of ethics in the ex ante evaluation of infrastructure projects and transportation policies Aiming more to raise questions and provoke thought than to provide answers his balanced and systematic treatment of the subject makes the book an invaluable resource one which should be on the shelves and more importantly in the minds of every transportation policymaker planner and modeler Patricia L Mokhtarian University of California Davis US This book on transport ethics fills a clear gap in the literature Many researchers and practitioners in the transport field are aware that transport policies have important ethical dimensions but these have not been systematically explored in the literature Bert van Wee did a great job by bringing transport and ethics together His decision to focus on ex ante evaluations of transport policies works out very well since it enables him to achieve considerable depth on a theme that might otherwise be too broad Piet Rietveld Free University Amsterdam The Netherlands Transport impacts on all aspects of our lives and businesses but the inclusion of ethics is not seen as a central concern This book fills a major gap in the literature through its understanding of the many important dimensions of ethics and its treatment of a range of situations in transport through asking about the why what and how as it relates to ethics The clear conclusion is reached that ethics should feature much more prominently in all transport decisions but that it is also context specific in both time and space The approach adopted is transparent and informative and the author guides the reader through the main conceptual and theoretical issues using examples to illustrate the range of important ethical choices raised in the evaluation of transport policies and practices David Banister University of Oxford UK This insightful book discusses the use of Cost Benefit Analysis CBA for transport policy options from an ethical perspective Each detailed chapter deals with issues such as the use and ethical aspects of CBA in transport social exclusion the environment and long term sustainability safety ethics of research and modelling transport It summarizes ethics based critics on CBA and discusses their relevance for accessibility the environment and safety In addition it explores ethical dilemmas of doing CBAs and CBA related research The book concludes with possible avenues for furthering exploring the links between transport and ethics Transport and Ethics will appeal to researchers in the area of CBA for transport postgraduate and undergraduate students in transport economics transport policy transport planning and transport geography as well as policy makers in the area of transport

Aspects of Transport Ethics Ulli Zeitler, Centrum för samhällsarbete och mobilisering, 1997

Transforming Urban Transport Nicholas Low, 2012-12-12 Transforming Urban Transport confronts head on the dilemma faced by a world wedded to mobility the danger of continuing along the fossil fuelled path and the real paucity of viable technological alternatives which can be deployed in time To respond to the dilemma the ideal of urban transport must be changed from auto based mobility to systems of sustainable transport in which public transport and non

motorised transport work together to reduce climate change pressures enhance urban quality and preserve life and health The book challenges the commonly held view that a combination of urbanity and higher residential density expressed in compact cities expected to have greater public transport use will resolve urban transport environment problems instead showing that transport systems can be changed to meet the environmental imperatives without the massive spatial change implied But the problem of change of urban transport is profoundly institutional and cultural Changes in urban mobility and transport require local institutional policy action To support such action the book explores new methods of governance of transport in dispersed and concentrated cities new techniques for assessing transport need ways of improving childhood mobility guidelines for political mobilization and norms of knowledge sharing Drawing together leading scholars from different disciplines in Australia Japan and China this book provides a unique fusion of Asian and Australasian perspectives and engages with the coming needs of transport planning practitioners in both high density and dispersed cities
