you rethinking what's possible for your health and wellbeing now and for years to come *The College*, 2005 [The Emotional Life of Your Brain](#) Richard J. Davidson, 2012-12-24 What is your emotional fingerprint? Why are some people so quick to recover from setbacks? Why are some so attuned to others that they seem psychic? Why are some people always up and others always down? In his thirty-year quest to answer these questions, pioneering neuroscientist Richard J. Davidson discovered that each of us has an Emotional Style composed of Resilience, Outlook, Social Intuition, Self-Awareness, Sensitivity to Context, and Attention. Where we fall on these six continuums determines our own emotional fingerprint. Sharing Dr. Davidson's fascinating case histories and experiments, *The Emotional Life of Your Brain* offers a new model for treating conditions like autism and depression as it empowers us all to better understand ourselves and live more meaningful lives.

*Who are you?* Axel Cleeremans, Changiz Mohiyeddini, Livio Provenzi, Sara Palermo, 2025-06-23 Psychology and the neurosciences attempt to understand who we are, what makes us us. At its core, this involves explaining how the biological activity of the brain produces mind, our mental states, and everything that we feel. But we also need to address questions such as how our mind develops, how we interact with other people, how we perceive the world around us, how we make decisions, in short, how does our mind work? The core goal of this collection is to offer a set of articles highlighting some of the central concepts and empirical findings in the broad domains of psychology and human neuroscience. Many of these findings are surprising in different ways and hence of inherent interest to the wider public and in particular to an audience of kids who are at an age where one tries to understand oneself. The collection will involve contributions from different Frontiers in Psychology SCEs and will include a variety of approaches and of domains such as Perception, Core findings, but also biases, illusions, and other surprising phenomena. Consciousness: How come we are aware of ourselves? What can we do unconsciously? Emotion: What role do they play in decision making? How can we control them? Language: How come we learn to speak without instruction? Is it good to be bilingual? Gender: How do our sexual preferences and identity develop? Development: What changes as we grow up? Can kids sometimes be better than adults? Memory: How is our memory organized? How do we make it better? The brain: How does the brain work? What can go wrong? Culture: Do people in different cultures see the world differently?

Manuscripts will preferentially include experimental findings put in the context of core theoretical constructs. **Time After Time: A young adult 1980s time travel novel** Sara Crawford, 2023-10-27 Megan Gallagher has only ever seen her mother as neurotic and overworked. When a Whitney Houston song at the 80s dance sends Megan back to 1987, she discovers her teenage mom dressed in all black and sneaking liquor in the bathroom. After preventing her mom's drunk car accident, Megan realizes she has one month to get her teenage parents to stop partying and learn enough about her family's secret to get back home. Too bad the much cuter teenage version of her history teacher is such a distraction. With time running out and her future at stake, Megan must learn that when it comes to family, you can't always get what you want, but you might just get what you need. A fast-paced novel about love and family and the 1980s that manages to be both totally tubular and amazingly
