

NPV for the project by integrating the interdependency between these mechanisms.

→ **Simultaneous Optimisation** –

Optimises mine schedule, cut-off grade, stockpile, and optionally blending, in a single step.

→ **Blending** – Optional enhancement to the simultaneous optimisation module for final product or process input blend constraints.

Special Modules

Whittle's special modules build on the life-of-mine scheduling modules to allow extra value to be realised using techniques for blending, stockpile and cut-off optimisation, and block value calculations.

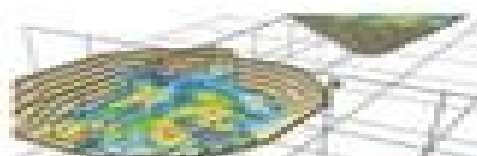

→ **Blending** – Blends scheduled material to final product or process input constraints, in conjunction with the Simultaneous Optimisation module, allows the simultaneous optimisation

of the mining schedule, final product or process input blend constraints, stockpiles and cut-offs for the mine.

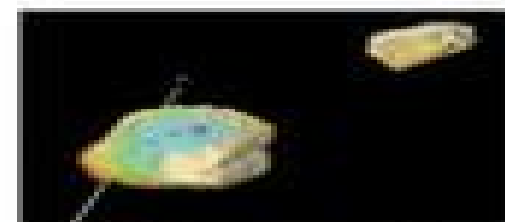

→ **Stockpiles and cut-offs** –

Optimises cut-off strategy and stockpile utilisation for standard life-of-mine schedules.

→ **Value Expressions** – Enhances the stockpiles and cut-offs module to work with partial recoveries and supports multiple methods for calculating block values and partial recoveries.

Much of Whittle's optimisation (mining input grades with the Stockpile module).

Simultaneous NPV in simultaneous optimisation with the Stockpile module.

Simultaneous Optimisation delivers global optimal NPV in a single step from multiple optimisation components applied sequentially.
