Review of the New York City Watershed Protection Program National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Water Science and Technology Board, Committee to Review the New York City Watershed Protection Program, 2021-01-04 New York City's municipal water supply system provides about 1 billion gallons of drinking water a day to over 8.5 million people in New York City and about 1 million people living in nearby Westchester, Putnam, Ulster, and Orange counties. The combined water supply system includes 19 reservoirs and three controlled lakes with a total storage capacity of approximately 580 billion gallons. The city's Watershed Protection Program is intended to maintain and enhance the high quality of these surface water sources. Review of the New York City Watershed Protection Program assesses the efficacy and future of New York City's watershed management activities. The report identifies program areas that may require future change or action, including continued efforts to address turbidity and responding to changes in reservoir water quality as a result of climate change.

Handbook of Less-Common Nanostructures Boris I. Kharisov, Oxana Vasilievna Kharissova, Ubaldo Ortiz-Mendez, 2012-03-19 As nanotechnology has developed over the last two decades, some nanostructures such as nanotubes, nanowires, and nanoparticles have become very popular. However, recent research has led to the discovery of other less common nanoforms which often serve as building blocks for more complex structures. In an effort to organize the field, the Handbook of Less Common Nanostructures presents an informal classification based mainly on the less common nanostructures. A small nanotechnological encyclopedia, this book describes a range of little-known nanostructures. Offers a unifying vision of the synthesis of nanostructures and the generalization of rare nanoforms. Includes downloadable resources with color versions of more than 100 nanostructures. Explores the fabrication of rare nanostructures, including modern physical, chemical, and biological synthesis techniques. The Handbook of Less Common Nanostructures discusses a classification system not directly related to the dimensionality and chemical composition of nanostructure-forming compounds or composites. Instead, it is based mainly on the less common nanostructures. Possessing unusual shapes and high surface areas, these structures are potentially very useful for catalytic, medical, electronic, and many other applications.
